This Operation and Safety Manual provides the information needed to safely operate the XR842 Reach Forklift. This manual should be considered a permanent part of the forklift, and kept in the protective manual case located in the operator’s cab.

**Notice**

Before operating the forklift, read this manual completely and carefully to understand the safety instructions and the operation of controls and safety equipment. You must comply with all DANGER, WARNING, and CAUTION notices. They are for your benefit.

**Warning**

Improper operation of this forklift could result in death or serious injury.

BEFORE starting the engine, do the following:

- Read the Operation and Safety Manual
- Read all the Safety Labels on the Forklift
- Clear the area of all other persons

Learn and practice safe use of forklift controls in a safe, clear area, BEFORE you operate this forklift on a work site.

It is your responsibility to observe applicable laws and regulations and to follow manufacturer’s instructions on forklift operation and maintenance.

**Replacement Manuals**

Replacement manuals for the XR842 Reach Forklift can be obtained by contacting our parts department by phone or visiting our website:

Xtreme Manufacturing
Phone: (800) 497-1704
www.XMFG.com

**Model / Serial Plate**

When contacting our parts department, please have the forklift serial number available. The serial number plate is located in the operator’s cab, at the base of the seat.

For easy reference, you can record the serial number in the space below.

Serial Number: ________________

**Orientation**

Right side, left side, front, and rear are directional references given from the operator’s seat when facing forward.
Safety

Safety Disclaimer

Xtreme Manufacturing reserves the right to make technical changes for product improvement. This manual may contain illustrations and photographs (for demonstration purposes), which slightly deviate from the actual product.

Safety information provided in this manual is a basic guide and an attempt to prevent accidents. Xtreme Manufacturing cannot anticipate every circumstance that might involve a potential hazard. Warnings in this manual and on the forklift are NOT all-inclusive.

You are responsible for safe operation of the forklift and all attachments. You must satisfy yourself that the techniques, operating procedures, work methods, or mentioned by Xtreme Manufacturing.

The safety of everyone around the forklift depends significantly on your knowledge and understanding of all correct and safe operating practices and procedures. You can help prevent accidents by remaining alert and recognizing potentially hazardous situations.

Follow State and Federal health and safety rules and/or local regulations for operating and maintaining the forklift.

• This manual does not replace any laws and regulations.
• The operator is required to comply with all applicable laws and regulations.

Signal Words

Signal words are the word or words that call attention to the safety sign and designate a degree or level of hazard seriousness. The signal words used in this manual are DANGER, WARNING, and CAUTION.

Danger

DANGER (Red) used with the safety alert symbol indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

Warning

WARNING (Orange) used with the safety alert symbol indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Caution

CAUTION (Yellow) with the safety alert symbol indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury.

CAUTION (Yellow) used without the safety alert symbol indicates a potentially hazardous situation which, if not avoided, may result in property damage.

Safety Symbols

Safety symbols are provided to remind the operator of hazardous situations. Xtreme Manufacturing provides these symbols in an attempt to inform all operators, regardless of reading and language skills, of as many potential hazards as possible. These symbols cover many, but not all, potential dangers and hazards associated with operating the forklift.

Make safety a high priority while operating the forklift. Learn and follow all safety messages in this manual and on forklift labels to prevent death, serious injury, or equipment damage. The following two pages include a list of some of the safety symbols that may be used on this forklift.
### Safety

- **General Safety Alert Symbol**
- **Read Operator Manual Before Operating This Telehandler**
- **Read Maintenance Manual Before Working On This Telehandler**
- **DO NOT OPERATE! Telehandler Down For Service Or Maintenance**
- **Perform Operator Inspection Before Starting This Telehandler**
- **DO NOT Operate If Using Alcohol, Drugs, Or Medications**
- **Personal Protective Equipment**
  - **Gloves**
  - **Safety Shoes**
- **Personal Protective Equipment**
  - **Ear Protectors**
  - **Safety Glasses**
- **Keep Flames And Ignition Sources Away**
- **Lead Acid Batteries Create Explosive Gases**
- **No Smoking**
  - **Keep Lit Cigarettes Away**
- **Keep Hands A Safe Distance From Rotating Fan Blades**
- **Hydraulic System Under Pressure**
- **Warning! Hydraulic Oil Under Pressure**
- **Hot Oil! DO NOT Open Unless Cap Is Cool To Touch**
- **Warning! Rotating Fan Blades Can Cut**
- **Warning! Rotating Belts Can Cut Or Entangle**
- **Keep Hands At A Safe Distance From Rotating Belts**
- **Make Sure All Safety Labels Are Attached And Legible**
- **Replace Worn And Illegible Safety Labels And Labels**
- **Use Three Points of Contact When Entering and Exiting Telehandler**

---

**Read Operator Manual Before Operating This Telehandler**

**Read Material Safety Data Sheets (MSDS) For Chemicals And Fluids**

**Know First Aid Instructions And/Or Locations On Work site**

**Personal Protective Equipment**
- **Hardhat**

**Personal Protective Equipment**
- **Safety Shoes**
- **Safety Glasses**

---

**Personal Protective Equipment**
- **Hardhat**

**Personal Protective Equipment**
- **Safety Glasses**

---

**Warning! Hot Oil! DO NOT Open Unless Cap Is Cool To Touch**

**Warning! Rotating Fan Blades Can Cut**
DO NOT Jump While Dismounting The Telehandler

DO NOT Allow Riders On Telehandler Frame Or Fenders

Falling Off Of Attachment Can Result In Death Or Serious Injury

Warning! Telehandler Roll Away Can Cause Death Or Serious Injury

Warning! DO NOT Travel With Boom Raised

DO NOT Raise Boom While Traveling On A Slope

Electrocution Can Cause Death Or Serious Injury

Danger! Keep A Safe Distance From Electrical Lines

DO NOT Allow Anyone Under A Raised Load

Pinch Points Hands

Explosion Hazard

DO NOT Use Ether As A Starting Aid

Warning! Establish Radio Communication Before Operating Solo

Hot Surface!

Keep Hands Away

Pinch Points Body

Have Adequate Ventilation If Operating This Telehandler In An Enclosed Space

Warning! Operate With Caution During Storms Or High Wind

DO NOT Use As A Personnel Carrier

Fasten Seat Belt

DO NOT Allow Riders On Auxiliary Attachments

Disengage Parking Brake

Set Parking Brake To OFF

DO NOT Jump!

If Telehandler Tips, Keep Seat belt ON And Brace Yourself

Tip Over Hazard, Especially Traveling Up A Slope Without A Load

Warning!

Telehandler Tip Over Can Cause Death Or Serious Injury

DO NOT Jump!

If Telehandler Tips, Keep Seat Belt ON And Brace Yourself

DO NOT Travel With Boom Raised

DO NOT Raise Boom While Traveling On A Slope

Electrocution Can Cause Death Or Serious Injury

Danger! Keep A Safe Distance From Electrical Lines

DO NOT Allow Anyone Under A Raised Load

Pinch Points Hands

Explosion Hazard

DO NOT Use Ether As A Starting Aid

Warning! Establish Radio Communication Before Operating Solo

Hot Coolant.
Safety

**Employer Responsibility**

Under Occupational Safety and Health Administration (OSHA) rules, employers are required to train workers about hazards related to operating and maintaining the forklift. Successful completion and certification of the Safety Training for Rough Terrain Forklifts is required.

Additional safety information and training resources can be obtained through these publications, organizations, and/or appropriate sources:

- (OSHA) Occupational Safety and Health Administration.
- (NIOSH) National Institute for Occupational Health and Safety.
- (ANSI) American National Standards Institute
- (AEM) Association of Equipment Manufacturers
- (ITSDF) Industrial Truck Standards Development Foundation

Always consult Material Safety Data Sheets (MSDS) for chemical hazards and first aid instructions for any oil or lubricant being used. MSDS should be available from the manufacturer/supplier of the fluid.

**Operator Qualifications**

Operators must be in good physical and mental condition, with appropriate reflexes, reaction time, vision, depth perception, and hearing.

Operators must possess a valid, current driver’s license as required for the work site; plus those required by applicable State, Federal, and/or local laws:

Successful completion and certification of Safety Training for Rough Terrain Forklifts is required.

- Operators must be properly instructed on how to operate the forklift and attachments.
- Operators must operate the forklift according to ALL appropriate safety regulations.
- Operator trainees must remain under constant observation and supervision of an experienced operator.

**Modifications**

**Warning**

Modifications to the forklift or attachments could affect forklift capacity and/or stability which could result in death or serious injury. DO NOT make modifications to the forklift or attachments without prior written approval from the manufacturer. Where such authorization is granted, capacity, operation, and maintenance instruction plates, tags, or labels shall be changed accordingly.

- Unauthorized modifications or alterations will void the warranty.
- DO NOT modify, disable, or bypass any safety devices.
- DO NOT burn or drill holes in forks or other attachments.

Structural damage, modification, or alteration, including welding or drilling, can impair and weaken the protective capability of the Rollover Protective Structure/Falling Object Protective Structure (ROPS/FOPS) and could result in death or serious injury.

- Replace the ROPS/FOPS, if it is damaged, before operating the forklift.

---

**Operator Responsibility**

**Warning**

Forklifts are potentially dangerous if proper safety procedures are not followed. Workers who operate, maintain, or work near the forklift can be at risk of roll over and run over incidents or can be crushed or caught by the forklift or its parts which could result in death or serious injury if the forklift is not properly operated or maintained.

Read the Operation and Safety Manual BEFORE operating the forklift. Follow all safety instructions and labels. Only operate the forklift if you understand the safety instructions and warnings in all applicable manuals and technical publications. Always follow all State and Federal health and safety laws and/or local regulations. You must have the required training, skills, and tools to perform installation, operation, maintenance, or repair procedures properly and safely. Make sure the forklift and attachments will not be damaged or made unsafe by any procedures you choose.
**Mounting/Dismounting**

**Warning**

Failure to use proper safety procedures when mounting and dismounting the forklift could result in death or serious injury.

- Keep steps clear of dirt, mud, snow, ice, debris, and other hazards.
  
  Face the forklift for mounting or dismounting. Use hand holds and steps to maintain three (3) points of contact at all times, either both hands and one foot or both feet and one hand.

- DO NOT use the controls, steering wheel, or foot pedals as hand holds or steps. Avoid accidentally engaging or disengaging a control.

DO NOT jump from the forklift. Clothing can get caught on pedals, levers, or other protruding parts. Landing on uneven surfaces could result in death or serious personal injury.

**Work Site Safety**

**Warning**

Use proper safety procedures and avoid hazardous situations while operating the forklift to prevent death, serious injury, or property damage.

- Check the work site for any hazards before operating the forklift.
- Check the work surface for loose soil conditions and overhead power lines.
- Contact your local underground utility service or digging hot line to mark all underground hazards.
- Learn the location of all underground hazards at the work site, such as:
  1. Gas and water pipes
  2. Electrical cables
  3. Sewers

Underground objects could cause death or serious injury.

**Warning**

- Operate the forklift only on firm, stable surfaces. Holes, obstructions, debris, loose fill, and other work site hazards could result in death or serious injury.
- DO NOT allow bystanders in the work area.
- Avoid personnel, machinery, and forklifts in the work area.
- Know the rules for movement of people and forklifts on the work site.
- Follow work site signs and signals.
- Check boom clearance before driving under a door opening, bridge, etc.
- Slow down when approaching obstructions. Use a spotter, if necessary.
- Stop for poor visibility conditions, such as dust, smoke, fog, etc. Wait until visibility improves before continuing.

DO NOT operate the forklift if you are using drugs, alcohol, or any medication that might impair your judgment or ability.

You must be 18 years of age or older to operate the forklift.

DO NOT operate the forklift on roads. The forklift is not equipped for road travel.

**Warning**

Operate the forklift in an enclosed area only if there is a ventilation system capable of routing hazardous fumes outside. Engine exhaust contains products of combustion that could cause death or serious injury.

**California Proposition 65**

Engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects, and other reproductive harm.

**Caution**

Use caution when operating the forklift during storms or strong winds.
Safety

⚠️ Warning

Wear appropriate protective clothing. Personal protective equipment can include, but is not limited to hardhat, gloves, footwear, safety glasses or goggles, and hearing protection. Make sure clothing is snug and properly belted. DO NOT wear loose clothing, jewelry, watches, or anything that can catch on forklift controls, moving parts, etc. Failure to wear the proper protective clothing could result in death or serious injury.

⚠️ Warning

Perform a pre-operation inspection and functional tests at the beginning of each work shift. Perform the pre-operation inspection first. DO NOT perform the pre-operation inspection with the engine running or hot. Contact with moving or heated parts could cause death or serious injury.

⚠️ Warning

Perform the pre-operation inspection and functional tests in an open area and away from any other obstacles or equipment. Inspections and functional tests may require assistance. Keep the assistant visible and a safe distance from the forklift to prevent death or serious injury.

⚠️ Warning

Become familiar with all safety and hazard labels, regulations, and procedures. Make sure all proper safety and hazard labels are attached to the forklift and remain legible.

⚠️ Warning

Consult Material Safety Data Sheets (MSDS) for chemical hazards and first aid instructions. MSDS should be available from the manufacturer or supplier of the fluid.

⚠️ Warning

Keep fingers and feet away from moving parts or pinch points to prevent pinching or crushing. DO NOT allow anyone between the tires and the forklift frame while operating the forklift. Doing so can result in death or serious injury.

⚠️ Warning

Always check the condition of the seat belt and mounting hardware before operating the forklift. If the seat belt or mounting hardware is defective, it may not properly restrain the operator, resulting in death or serious injury.

- DO NOT operate the forklift until the seat belt or mounting hardware is replaced, if worn or damaged.
- The seat belt MUST be worn while operating the forklift. Failure to wear the seat belt could result in death or serious injury.

Before Starting Forklift

⚠️ Warning

Keep the Operation and Safety Manual on the forklift at all times. Contact Xtreme Manufacturing for replacement manuals.

⚠️ Warning

Clearly define responsibilities and procedures for operating the forklift and all attachments. DO NOT proceed until you seek expert assistance from a qualified person if any doubt or question arises about the correct or safe methods for operating the forklift.

⚠️ Warning

To avoid death or serious injury, carefully read and understand all instructions before operating the forklift. DO NOT operate, modify, repair, or maintain the forklift unless you read and understand the instructions and warnings in this and all other applicable manuals and technical publications. Follow all State and Federal health and safety laws and/or local regulations.

⚠️ Warning

A brief description of controls, indicators, and instruments is provided as a convenience for the operator. These descriptions DO NOT provide complete operation instructions. Read and understand the entire manual to prevent death, serious injury, or equipment damage.

⚠️ Warning

Keep the assistant visible and a safe distance from the forklift to prevent death or serious injury.

⚠️ Warning

Always check the condition of the seat belt and mounting hardware before operating the forklift. If the seat belt or mounting hardware is defective, it may not properly restrain the operator, resulting in death or serious injury.

- DO NOT operate the forklift until the seat belt or mounting hardware is replaced, if worn or damaged.
- The seat belt MUST be worn while operating the forklift. Failure to wear the seat belt could result in death or serious injury.
Operators must be properly trained and qualified to operate this specific forklift. Know the location, learn the specific purpose, and demonstrate safe and proper use of all controls, instruments, indicator lights, and safety and instruction labels. Safety is your responsibility. Failure to follow these guidelines could result in death or serious injury.

To prevent death or serious injury, the operator must be seated with seat belt fastened, the travel select lever set to NEUTRAL, the Parking Brake switch ON (engaged), the service brake applied, and the area free of people and obstructions BEFORE starting the forklift.

Never try to escape the forklift if it becomes unstable. Learn and practice these safety procedures to protect yourself from a roll over or tip over incident:
- Remain securely fastened in the seat belt.
- Keep your head, body, and limbs within the Rollover Protection Structure/Falling Object Protection Structure (ROPS/FOPS).
- Brace yourself and hold on firmly.
- Lean away from the point of impact.
- Stay on the forklift and ride out the roll over or tip over.

DO NOT use the forklift as a work platform or personnel carrier. Falling of attachments could result in death or serious injury.

NEVER allow passengers to ride on the forklift. DO NOT allow riders on the frame or operator cab. Allowing passengers to ride could result in serious injury. The forklift is designed for the safety of the operator only.
Safety

⚠️ Warning
DO NOT travel with an elevated boom. Retract the boom fully. Lower the boom as low as practical for proper visibility. Maintain enough ground clearance for conditions. Traveling with an elevated boom can cause tip over, which could result in death or serious injury.

⚠️ Warning
NEVER use crab or four wheel (4W) steering for traveling at high speeds. Use only two wheel (2W) steering for higher speed travel and slow the forklift before turning. Rapid turning while using crab or four wheel steering can cause tip over which could result in death or serious injury.

⚠️ Warning
DO NOT shift through multiple gears with a single turn of the gear select lever. Allow the engine speed to slow down before shifting to the next lower gear. Improper use of the gear select lever could cause transmission damage or forklift tip over/roll over and result in death or serious injury.

⚠️ Warning
Allow for adequate clearance between the attachment and other objects when turning. The attachment extends beyond the front of the forklift. The operator must be aware of the maximum sweep of any attachment being used to avoid hitting personnel and other objects in the area and to prevent death, serious injury, or property damage.

⚠️ Warning
To prevent death, serious injury, or property damage, make sure the forklift comes to a complete stop before moving the travel select lever. A sudden change in direction of travel, while carrying a load, could reduce stability and/or cause the load to shift or fall.

⚠️ Warning
Operate the forklift for maximum stability. Unstable forklifts can tip over, resulting in death, serious injury, or property damage. Keep the forklift stable by following these and other appropriate guidelines:

- Adjust speed for terrain and conditions.
- Avoid obstacles by driving around them rather than over them, when possible.
- Start, stop, travel, steer, and brake smoothly.
- Load, unload, and turn the forklift on level ground, when possible.
- Slow down for turns.
- Slow down for rough, slippery, or soft terrain.
- Use caution around steep slopes, creeks, gullies, ridges, ditches, and ravines.
- Stay away from soft edges that could collapse under the forklift.

⚠️ Warning
Become completely familiar with the forklift before operating on slopes. The forklift could overturn due to sudden movement or while operating on a slope resulting in death or serious injury.

DO NOT raise the boom while operating on a slope. Raising the boom on a slope, even without a load, will change the center of gravity, could cause a tip over, and result in death or serious injury.

- DO NOT turn on a steep slope.
- DO NOT drive the forklift across slopes.
- Always drive the forklift straight up and down a slope (never drive diagonally up or down a slope).
- Drive the forklift forward up a slope (front of forklift facing uphill).
- Back the forklift down a slope when loaded (front of forklift facing uphill).
Follow appropriate procedures to prevent sudden changes in forklift speed that could result in death or serious injury.

- Turn the gear select lever to the lowest speed before descending a slope and before loading or unloading a trailer.
- DO NOT adjust the travel select lever while the forklift is moving.
- DO NOT coast downhill. Keep the travel select lever in the appropriate position.
- DO NOT exit the forklift without following proper shutdown procedures.

Engine fuel is flammable and can cause a fire or explosion resulting in death or serious injury. DO NOT smoke while refueling and keep sparks and open flames away from the forklift.

Contact with hot surfaces and the exhaust pipe after the forklift has been operated could result in serious personal injury.

Check warning indicators and gauges on the dash panel frequently during operation. If a warning indicator is illuminated or a gauge shows abnormal readings, stop the forklift, follow proper shut down tag the forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again. Ignoring warning indicators can result in death, serious injury, or property damage.

Caution

Release the key immediately once the motor starts. If the motor does not start, DO NOT crank the starter motor continuously for more than 15 seconds. Failure to release the key after the motor has started or continuous cranking can damage the starter motor.

Warning

The forklift includes a Frame Sway Override switch. Improper use of the Frame Sway Override switch could result in death, serious injury, or property damage.

Make sure the forklift frame is level before raising and extending the boom. Frame swaying left or right with the boom raised is extremely dangerous and can result in death or serious injury.

- Use the frame sway control to level the forklift before raising the boom.
- Reposition the forklift if it cannot be leveled using the frame sway control.
- DO NOT enter or exit a tilted cab.
- Remain seated with the seat belt securely fastened while the cab is tilted.
- Keep personnel at least 30 feet from a tilted forklift.

Load Safety

Warning

Failure to follow proper safety procedures when lifting, lowering, and traveling with a load could result in death, serious injury, or property damage.

DO NOT exceed forklift capacity of 10,000 lbs. The total rated capacity of the forks being used must equal or exceed forklift capacity. Forks can break causing loss of load and possible death or serious injury.

DO NOT exceed the manufacturer’s rated load for any auxiliary attachment. Any attempt to lift or carry loads in excess of the manufacturer’s rated load may cause forklift tip over, loss of load, or structural damage which could result in death or serious injury.

Failure to keep personnel clear of the load area while the load is being raised or lowered could result in death or serious injury. DO NOT lift, swing, or move a load over anyone or over a forklift cab.

- Review the rated load capacity of each auxiliary attachment before performing any operation.
- Use the correct load chart and NEVER exceed specified weights and load centers.
- DO NOT exceed the manufacturer’s recommended load capacity.
- DO NOT operate the forklift with an unsafe load distribution.
- Adjust the load as necessary, especially for nonstandard loads.
- Use caution when handling loose material that can fall into the cab.
- Remove overhanging load materials, when possible, and watch for sliding material.
- DO NOT reach a load over posts or other objects that can enter the cab, if tipped.
- Avoid sudden stops, starts, or turns.
- Avoid carrying a swinging load. If necessary, secure the load by attaching it to the forklift tie-downs and/or have another person assist with safely steadying the load.
**Attachments**

⚠️ **Warning**

Improper connection of an auxiliary attachment could result in death or serious injury. Attachments not locked into place can become unstable and fall on the operator or other personnel near the forklift.

- Make sure attachment locking devices are always in place.
- **DO NOT** operate the forklift until you have positive indication that the coupler pin and lever are fully engaged.
- Hydraulic attachments have a maximum hydraulic pressure rating. Failure to make sure the attachment is equipped with a pressure reducing valve, or is rated to be equal or greater than 3,500 psi, which is the maximum pressure of the forklift auxiliary hydraulic system at the quick-disconnect couplers, could result in death or serious injury.
- Make sure all hydraulic connections are tight (if equipped).

**Shut Down Procedure**

⚠️ **Warning**

To prevent death or serious injury, follow these procedures before leaving the forklift cab:

- Park forklift on a firm, level surface.
- Move travel select lever to NEUTRAL (N).
- Actuate (engage) the parking brake.
- Lower forks and attachments to the ground.

**NOTE:** The parking brake MUST be actuated (engaged) only when forklift is at standstill.

Always engage the parking brake before leaving the forklift. The forklift can roll if the parking brake is not ON (engaged), which could result in death, serious injury, or property damage.

- Turn Ignition switch to the OFF position.
- Remove the key.
- Unbuckle the seat belt.
- Place “Do Not Operate” tags on the Starter switch and steering wheel when maintenance or service is required.
- Block wheels when maintenance is required.

**Forklift Maintenance**

⚠️ **Warning**

Follow the manufacturer’s instructions for proper maintenance to make sure the forklift continues to meet manufacturer’s specifications. Failure to properly maintain the forklift can result in improper performance, which could cause death, serious injury, or property damage.

Attach “Do Not Operate” tags to the Ignition switch and steering wheel before beginning any service or maintenance.

- “Do Not Operate” tags indicate the forklift should not be operated until all service or maintenance is completed.
- Keep two (2) legible “Do Not Operate” tags with the forklift at all times. “Do Not Operate” tags are provided in this manual.
- **DO NOT** operate the forklift and attachments if they require repairs.
- Make sure basic maintenance is completed and service problems are corrected.
- Death or serious injury can result from operating a forklift before all repairs have been made and all proper maintenance is completed.

⚠️ **Warning**

Check hydraulic oil lines, tubes, and hoses carefully. **DO NOT** use your bare hand to check for leaks. Always use a board or cardboard when checking for a hydraulic leak. Escaping hydraulic fluid under pressure, even a pinhole size leak, can penetrate body tissue, which could cause death or serious injury. If hydraulic oil is injected into your skin, a doctor familiar with this type of injury must treat it immediately.

Serious injury could result from hydraulic oil pressure or hot oil. **DO NOT** remove a hydraulic tank filler cap unless it is cool enough to touch with bare hands. Remove the hydraulic tank filler cap slowly to relieve pressure. Relieve all pressure in a hydraulic system before any caps, lines, fittings, or related items are disconnected or removed.
It is possible for the forklift to move suddenly when the brakes are released, which could result in death, serious injury, or property damage. To prevent sudden movement of the forklift, place wheel chocks in front of and behind wheels before the brakes are released.

If the forklift is to be towed, make sure the released brake(s) can be reapplied or the tow forklift has the braking capacity to stop the forklift.

DO NOT use ether as a starting aid. Ether is flammable and can cause an explosion when starting the engine, which could result in death or serious injury. Follow the cold starting procedures and engine manufacturer’s specifications for using a starting aid.

Tires must have proper ballast. DO NOT replace foam-filled tires with pneumatic tires. Use of pneumatic tires will severely affect forklift load capacity, which could result in death, serious injury, or property damage.

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. Wash hands after handling these items.

Lead-acid batteries produce flammable and potentially explosive gases. To avoid death or serious injury when checking, testing, or charging batteries:

- DO NOT use smoking materials near batteries.
- Keep arcs, sparks, and open flames away from batteries.
- Provide ventilation for flammable vapors.
- Wear proper personal protective equipment, including safety glasses.

Fluid in electric storage batteries contains sulfuric acid, which is poison and could cause severe chemical burns. Avoid all contact of fluid with eyes, skin, or clothing. Use protective gear when handling batteries. DO NOT tip a battery beyond a 45° angle in any direction.

If contact does occur, follow these First Aid suggestions:

- External contact - Flush with water.
- Eyes - Flush with water (including under the eyelids) for at least 15 minutes and get medical attention immediately. Flushing must begin immediately to avoid permanent eye tissue damage.

- Internal contact - Drink large quantities of water or milk to dilute stomach contents. Do not induce vomiting. Get medical attention immediately.

IMPORTANT - In case of internal contact, DO NOT give fluids that induce vomiting.

California Proposition 65

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. Wash hands after handling these items.

Wear eye protection when starting a forklift with jump start cables. Improper jump start procedures could cause the battery to explode, which could result in death or serious injury.

- Never jump start a frozen battery, as it can explode. Let the battery thaw out before charging.
- NEVER jump start the forklift when travel select lever is in gear, which can cause the forklift to lurch forward or backward, and could result in death, serious injury, or property damage.
- To avoid injury or death when jump starting with another forklift, make sure the two (2) forklifts are not touching.
- DO NOT allow jump start cable ends to contact each other.
- Connect charged battery positive (+) to stalled battery positive (+).
- Connect charged battery negative (-) to stalled forklift ground. Make the connection to the stalled forklift ground last.
- Connect jump start cable to stalled forklift ground a safe distance from the battery to prevent sparks near the battery.
- Jump start only with a power source with the same voltage as the stalled forklift.
- Turn off all lights and accessories on the stalled forklift to prevent them from operating when the power source is connected.
- Electrolyte contains acid and could cause serious personal injury if it contacts the skin or eyes.
Safety

**Dead Engine Towing**

**Parking Brake - Manual Release**

The parking brake is a SAHR - Spring Applied Hydraulic Released brake. In case of a breakdown or a malfunction of the hydraulic system, the parking brake can be released by using a manual high pressure hydraulic pump that must be connected to the axle parking brake ports (Figure 3).

**NOTE:** The minimum release pressure is 435 psi. The maximum release pressure is 653 psi.

**Warning**

NEVER perform this procedure with the engine running. The Ignition Switch should be in OFF position, the Parking Brake ON (engaged) and the red cover over the parking brake switch CLOSED.

**Warning**

Block all four (4) wheels. Failure to do so could result in death or serious injury from forklift roll away.

1. Block all four wheels to prevent the forklift from moving once the parking brake is disabled.
2. Position the towing vehicle in place. Attach any chain needed to secure the disabled forklift.
3. Locate the two (2) parking brake hydraulic connection ports as shown in Figure 3.

4. Remove the hydraulic hose connected to one port
5. Connect a manual HP hydraulic pump to the parking brake ports using a threaded coupling (9/16" - 18 UNF) and a collector bottle, as shown in Figure 4.
6. Apply hydraulic pressure using the manual hydraulic pump to release the brake.

**NOTE:** For illustration purposes, we used an Enerpac P 142 manual HP pump.

**Figure 4. Connect HP Pump to HP Parking Brake Ports (both sides of axle). See Figure 3 For Ports Location.**

7. To reapply parking brake, disconnect the manual hydraulic pump from the parking brake release ports of the axle and re-connect the hydraulic hose.

8. Repeat steps 4 to 7 for the other hydraulic connection port (Figure 3)
9. Crawl out from under the forklift and clear the area of any unnecessary personnel.
10. Carefully remove the blocking from each of the four (4) tires and tow the vehicle to a secure location.

**Warning**

NEVER operate the forklift with the manual hydraulic pump connected.

![Warning: Tip-Over Hazard](image1.png)

**Warning**

**TIP-OVER HAZARD**

DEATH or SERIOUS INJURY could result from operating vehicle on upward slope. DO NOT OPERATE vehicle on upward slope with boom fully retracted.

![Danger: Crushing Hazard](image2.png)

**Danger**

**CRUSHING HAZARD**

DEATH or SERIOUS INJURY will result from vehicle roll away. Before dismounting:

- Engage parking brake.
- Lower boom and load to the ground.
- Follow all shutdown procedures.

![Warning: Welding and Modification Hazard](image3.png)

**Warning**

**WELDING AND MODIFICATION HAZARD**

DEATH or SERIOUS INJURY could result from improper welding or modification of equipment.

- DO NOT WELD on any structural member or make modifications without factory authorization.
- Disconnect battery cables and alternator before welding on equipment.
- Welding may cause electrical or structural damage to equipment.
- Modifications made without factory authorization will void warranty.

![Warning: Falling Hazard](image4.png)

**Warning**

**FALLING HAZARD**

DEATH or SERIOUS INJURY could result from falling. DO NOT RIDE on vehicle.

![Warning: Unrestrained Operator Hazard](image5.png)

**Warning**

**UNRESTRAINED OPERATOR HAZARD**

DEATH or SERIOUS INJURY could result from not being properly restrained. FASTEN SEAT BELT.

WARNING
TIP OVER HAZARD
DEATH or SERIOUS INJURY could result from improper operation.
DO NOT EXCEED RATED LIFT CAPACITY
• Max capacity of lifting point is 10,000 lbs.
• Refer to the “Standard Fork Carriage Load Chart” for vehicle’s load handling capacity.
• Refer to ANSI / ITSDF B56.6 for information regarding the handling of suspended loads.

CAUTION
CARRIAGE DAMAGE
DEATH or SERIOUS INJURY could result from improper operation when using tow connection.
• DO NOT ELEVATE BOOM ABOVE 30° WHEN TOWING.
• DO NOT EXCEED RATED TOW CAPACITY.
• Max vertical load 500 LBS.
• Max tow capacity 5000 LBS.
CAUTION

EQUIPMENT DAMAGE
Wait at least two (2) minutes after shutting engine off before setting the battery disconnect switch to OFF. Equipment damage may occur if the engine control systems are not allowed to shutdown properly.

- Block Forks - 2” X 2” X 48”
- Utility Bucket - 1.25 cu. yd.
- Concrete Bucket - 0.5 cu. yd., or 1.00 cu. yd.
- Truss Boom - 12’
- Wallboard/Sheet Material Handler

#### Accessories and Options

- Enclosed Cab
- 4th Steer Mode, Rear Pivot
- Air Conditioning
- Work Light Package
- Rotating Beacon
**Warning**

A brief description of controls, indicators, and instruments is provided as a convenience for the operator. These descriptions DO NOT provide complete operation instructions. Read and understand the entire manual to prevent death, serious injury, or equipment damage.

---

**Ignition Switch**

A key is required to operate the ignition switch.

<table>
<thead>
<tr>
<th>Position</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Shuts down entire electrical system, except the horn and accessory outlet.</td>
</tr>
<tr>
<td>RUN</td>
<td>All controls and indicators are operable.</td>
</tr>
<tr>
<td>START</td>
<td>Engages starter motor to crank engine.</td>
</tr>
</tbody>
</table>

**NOTE:** The START position is spring-loaded. When the key is released, the Ignition switch will automatically return to the RUN position.

---

**Accessory Outlet**

A 12 volt accessory outlet is provided as a power source for personal items, such as a radio or cell phone.

---

**Accelerator Pedal**

Press the accelerator pedal to increase engine speed. The accelerator pedal is spring-loaded to return to idle speed.
Operator Cab

**Service Brake Pedal**

Press the service brake pedal to slow or stop the forklift. The service brake pedal activates the service brakes on all four (4) wheels.

![Service Brake Pedal](image)

**Steering Wheel**

Turn the steering wheel left or right to steer the forklift in the corresponding direction.

![Steering Wheel](image)

**Horn Button**

Press the horn button to sound the horn.

![Horn Button](image)

**Operator Seat**

The operator seat can be adjusted four (4) ways: weight suspension, lumbar support, fore and aft, and backrest angle.

![Operator Seat](image)

**Operator Seat Controls**

The operator seat can be adjusted four (4) ways: weight suspension, lumbar support, fore and aft, and backrest angle.

![Operator Seat Controls](image)
The seat controls include a four (4) position lumbar support knob. Rotate the lumbar support knob to raise, lower, increase, or decrease the lumbar support.

Pull the fore and aft adjustment lever outward from the seat to release the seat lock. Slide the seat forward or backward to a comfortable location and release the lever to lock the seat in the desired position.

Pull the backrest angle adjustment lever up to release the seat backrest lock. Adjust the angle of the backrest and release the lever to lock the backrest to the desired angle.
Operator Cab

## Seat Belt

**Warning**

Always check the condition of the seat belt and mounting hardware before operating the forklift. If the seat belt or mounting hardware is defective, it may not properly restrain the operator, which could result in death or serious injury.

- DO NOT operate the forklift until the seat belt or mounting hardware is replaced, if worn or damaged.
- The seat belt MUST be worn while operating the forklift. Failure to wear the seat belt could result in death or serious injury.

The forklift is equipped with a standard two inch (2") wide retractable seat belt. A three inch (3") wide retractable seat belt is available where required by local laws and regulations.

Before starting the engine, adjust the seat for position and comfort (refer to the Operator Seat section of this manual) and then adjust the seat belt as follows:

1. Grasp the free end of the seat belt (located on the left side of the seat) and make sure the belt webbing is not twisted or entangled in any portion of the seat assembly.
2. Pull the retractable seat belt across your lap. Position the seat belt as low on your body as possible.
3. Insert the latch plate into the buckle (on the right side of the seat) until a “click” is heard.
4. Make sure seat belt retracts snugly across your lap.

### Rear View Mirrors

Two (2) adjustable rear view mirrors are provided to aid the operator’s rear vision. One (1) rear-view mirror is mounted on the upper left of the operator’s cab.

**Warning**

DO NOT adjust the seat or seat belt while the forklift is moving. Keep both hands on the wheel while the forklift is moving to prevent loss of forklift control which could result in death or serious injury.

![Figure 22. Retractable Seat Belt](image)

![Figure 23. Cab-Mounted Mirror](image)
One (1) rear-view mirror is mounted on the right side of the chassis.

**Controls and Indicators**

**Travel Select Lever**

The travel select lever has three (3) positions: FORWARD, NEUTRAL, and REVERSE, which change the direction of travel.

<table>
<thead>
<tr>
<th>Position</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>F (Forward)</td>
<td>UP Position (away from the operator)</td>
</tr>
<tr>
<td>N (Neutral)</td>
<td>CENTER Position</td>
</tr>
<tr>
<td>R (Reverse)</td>
<td>DOWN Position (toward the operator)</td>
</tr>
</tbody>
</table>

The travel select lever automatically locks when it is in the NEUTRAL position. The operator must raise and move the travel select lever when changing to the FORWARD or REVERSE position.

NOTE: The travel select lever must be in the NEUTRAL position to start the forklift.

NOTE: The back-up alarm automatically sounds when the travel select lever is in the REVERSE position.

**Gear Select Switch**

The Gear Select switch has a twist grip handle with the following positions: 1 - FIRST, 2 - SECOND, 3 - THIRD, and Automatic.

NOTE: The forklift can be operated in three (3) forward and three (3) reverse gears. Automatic should be selected for normal driving.
Operator Cab

**Parking Brake Switch**

The Parking Brake switch (A) has two (2) positions: ON and OFF.

Set Parking Brake switch (A) to ON (DOWN) to engage the parking brake and to OFF (UP) to disengage the parking brake. The parking brake indicator (B) illuminates when the parking brake is set to ON (engaged).

**Load Capacity Charts**

The Load Capacity Charts are located on the left side of the front control panel. The Load Capacity Charts are provided to assist the operator in determining how to safely handle loads with the forklift, including boom angle, height, and reach.

**Display Indicators**

The display allows the operator to view vital engine information and other critical functions, including gauge display, engine diagnostics to monitor engine condition and performance, fault codes, and warning indicators.
A. HIGH HYDRAULIC OIL TEMP
The hydraulic oil temperature indicator illuminates when the oil temperature is above 180°F. If the hydraulic oil temperature indicator illuminates, stop and idle the engine to allow time for cooling. If the hydraulic oil temperature indicator does not go out after five (5) minutes, stop the forklift, follow proper shut down procedures, tag the forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again.

B. WATER IN FUEL
The Water in Fuel Indicator will be displayed when there is water present in the Diesel fuel.

C. LOW BRAKE PRESSURE INDICATOR AND WARNING
The Low Brake Pressure indicator illuminates if the hydraulic oil pressure gets too low. If the Low Brake Pressure indicator is illuminated, do not release the parking brake or engage transmission until the indicator is out. If the indicator does not go out, stop the forklift, follow proper shut down procedures, tag forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again.

D. LOW OIL PRESSURE WARNING
The Oil Pressure Warning is displayed when the engine oil pressure is DANGEROUSLY low, 0-10 psi. If the Oil Pressure Warning comes on during normal operation, stop the forklift, follow proper shut down procedures, tag forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again.

E. WAIT TO START
The Wait to Start Indicator is displayed when the key switch is moved to the RUN position. Wait until the indicator goes out before starting the engine.

F. SERVICE REMINDER
The Service Reminder Indicator flashes for 30 seconds at key ON to indicate that Service is required.

G. REAR AXLE LOCKED INDICATOR
Indicates that the rear axle is locked at or above 40 degrees boom angle.

H. TACHOMETER
The Tachometer indicates engine RPM using an analog display and below it a digital display.

I. CLOCK

J. OIL PRESSURE INDICATOR
The Oil Pressure Indicator monitors the engine oil pressure. At normal operating pressure it stays green (above 20 psi). Between 12-20 psi it turns yellow and below 10 psi it becomes red. If the indicator turns red (shows oil pressure below 10psi) and the Oil Pressure Warning (red) is displayed, stop the forklift, follow proper shut down procedures, tag forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again.

K. REAR AXLE CENTERED INDICATOR
Illuminates when the rear wheels are centered.

L. DIRECTION OF TRAVEL INDICATOR
Displays the direction of travel selected: Forward or reverse.

M. FUEL GAUGE
The fuel gauge indicates the percentage of fuel left in the tank. The total capacity of the fuel tank is 48 gallons (181 L). Above 20% of fuel left in the tank, the indicator is green, turning yellow between 10 and 20%. It turns red when the fuel level is very low, 10% and under.

N. TRANSMISSION GEAR INDICATOR
Displays the transmission gear selected. The available positions are: 1, 2, 3, and Automatic. Automatic is displayed as A1, A2, or A3, with the numbers representing the current gear the transmission is in.

O. ENGINE COOLANT TEMP INDICATOR
The Engine Coolant Temp Indicator monitors the temperature of the coolant in the engine cooling system. After starting the forklift, allow time for the indicator to display a temperature close to the normal range before operating the forklift. After the engine has sufficiently been warmed up, normal engine coolant temperature should read between 180 to 205°F. The Engine Coolant Temp Indicator turns yellow at coolant temperatures between 205 and 215°F to warn that the engine operates at higher than normal temperature. The Engine Coolant Temp Indicator becomes red when the temperature reaches 216°F, indicating an engine overheating situation.

P. BATTERY VOLTAGE INDICATOR
The Battery Voltage Indicator monitors the amount of charge in Volts (V). The normal system voltage for the 12V system is between 12.5 and 14 V. The indicator turns yellow if the charge is between 11.5 and 12.5 V, and becomes red if the charge drops below 11.5V. If the voltage indicator shows abnormal readings (below 11.5V), stop the forklift, follow proper shut down procedures, tag forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again. The machine has an additional 24V circuits for the starter and alternator.

Q. MENU BUTTON
The MENU button brings up the MAIN MENU. on the screen.

R. HOUR METER
Indicates and records engine operating hours. Use the Hour meter to establish a forklift maintenance schedule.
5. TRANSMISSION TEMP INDICATOR AND WARNING
The Transmission Temperature Indicator monitors and displays the oil temperature within the transmission. At normal operating temperature it stays green. Between 215 and 224 °F it turns yellow to warn that the transmission operates above the recommended temperature range. When the transmission oil temperature reaches 225 °F the display turns red to indicate an overheating situation.

Display Features
The display allows the operator to view vital engine information and other critical functions, including gauge display, engine diagnostics to monitor engine condition and performance, fault codes, and warning lights.

POWER UP
When the ignition is turned on, the display powers up and defaults to GAUGE DISPLAY mode. The display should remain in this mode for normal operation.

MAIN MENU
Pressing the MENU button will bring up the MAIN MENU. Pressing the MENU button again, or the GAUGE DISPLAY soft button, will return to the GAUGE DISPLAY mode.

UTILITIES
Pressing the UTILITIES soft button will bring up the Hidden Utilities Menu.

SYSTEM SETTINGS
Pressing the SYSTEM SETTINGS soft button will display engine information. The top left button restores the factory defaults. The up/down buttons are used to navigate this menu. Pressing the MENU soft button will return to the previous menu.

When making changes to the system settings, you will be prompted to confirm or cancel the new entries.

S. TRANSMISSION TEMP INDICATOR AND WARNING
The Transmission Temperature Indicator monitors and displays the oil temperature within the transmission. At normal operating temperature it stays green. Between 215 and 224 °F it turns yellow to warn that the transmission operates above the recommended temperature range. When the transmission oil temperature reaches 225 °F the display turns red to indicate an overheating situation.

Display Features
The display allows the operator to view vital engine information and other critical functions, including gauge display, engine diagnostics to monitor engine condition and performance, fault codes, and warning lights.

POWER UP
When the ignition is turned on, the display powers up and defaults to GAUGE DISPLAY mode. The display should remain in this mode for normal operation.

MAIN MENU
Pressing the MENU button will bring up the MAIN MENU. Pressing the MENU button again, or the GAUGE DISPLAY soft button, will return to the GAUGE DISPLAY mode.

UTILITIES
Pressing the UTILITIES soft button will bring up the Hidden Utilities Menu.

SYSTEM SETTINGS
Pressing the SYSTEM SETTINGS soft button will display engine information. The top left button restores the factory defaults. The up/down buttons are used to navigate this menu. Pressing the MENU soft button will return to the previous menu.

When making changes to the system settings, you will be prompted to confirm or cancel the new entries.
CLOCK SETUP
Pressing the CLOCK SETUP soft button will enter a menu where the clock can be setup or adjusted.

SERVICE REMINDERS
Pressing the SERVICE REMINDERS soft button will display data pertaining to maintenance schedules.

If a scheduled service is due, the GAUGE DISPLAY indicates below the tachometer in the hour meter box, the service needed.

TRANSMISSION CALIBRATION
After each transmission oil change the transmission needs to be re-calibrated to accommodate for clutch wear. When the TRANSMISSION CALIBRATION button is pressed, the TCU (Transmission Control Unit) enters transmission calibration mode and it checks first for all the machine conditions necessary for a successful calibration. It displays a green check symbol to the right of the condition if it is met. Conditions:

- Shifting position Neutral
- Engine in idling speed
- Parking brake actuated
- Transmission in operating temperature

When all of the machine conditions for calibration are met, the TCU enters clutch calibration mode. It calibrates the first clutch, and upon successful calibration it moves to the second clutch and so forth. The forklift must be OFF after calibration is complete.

INCHING (OPTIONAL FEATURE)
Inching allows for reducing the driving speed to a crawl without modification of the engine speed, which allows driving at extremely low speed (inching). The Inching % (Requested Clutch Slip) is used to enable or disable the Inching function when the brake pedal is applied.
• With Requested Clutch Slip of 0% the transmission will not change to Inching or ClutchCutOff mode, then the brake pedal is applied. The transmission keeps the clutches closed.

• With Requested Clutch Slip of 50% (0x7D) the Inching is enabled. When the brake pedal is released the clutches are closed; when brake pedal is applied, the direction clutch starts to slip and the traction can be controlled from the driver with the brake pedal.

**INCHING CALIBRATION (OPTIONAL FEATURE)**

After each new adjustment of the inching linkage, the INCHING CALIBRATION must be carried out. When there are no faults present on the screen, the operator can hit the play button to start the calibration. There will be on-screen instructions detailing the actions needed but essentially the operator will need to depress the pedal and then release it based on the on-screen instructions.

**DIAGNOSTICS**

Pressing the ENGINE DIAGNOSTICS soft button will display engine information. Use the up/down buttons to navigate Pressing the MENU button will return to the GAUGE DISPLAY mode.

**USER SETTINGS**

Pressing the USER SETTINGS soft button will enter a mode where some display settings may be adjusted. The default settings can be restored using the top left button.

Confirm or cancel each restored setting on the next screen. Pressing the MENU button will return to the previous menu.

**CLEAR ALL FAULTS**

Pressing the CLEAR ALL FAULTS soft button will remove all faults displayed.
The boom control handle has variable motions from the center position that control boom and tilt functions. The boom control handle is used to raise, lower, extend, retract the boom, tilt the carriage (or attachment), and control auxiliary functions (when equipped with a carriage or attachment with additional functions).

**NOTE:** The boom control handle is a variable speed control. Function speed is proportional to handle movement. The more the handle is moved in the appropriate direction, the faster the corresponding function will occur.

**NOTE:** Increasing engine speed can increase boom lift and extend speed.

**NOTE:** Two (2) boom functions can be performed at the same time by moving the handle into the corner between (2) functions.
The Attachment Tilt Switch located on the top of the boom control handle controls attachment tilt functions.

The Attachment Tilt Switch:
- Controls the attachment tilt functions by rolling the switch upward and downward.
- Is a variable speed switch. Function speed is proportional to how far the switch is rolled. The more the switch is rolled in the appropriate direction, the faster the corresponding function will occur.

<table>
<thead>
<tr>
<th>Function</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attachment tilt down</td>
<td>Roll switch upward</td>
</tr>
<tr>
<td>Attachment tilt up</td>
<td>Roll switch downward</td>
</tr>
</tbody>
</table>

NOTE: The attachment carriage will retain any set angle throughout boom raising, lowering, retracting, or extending operations.
Frame Sway Control Handle

<table>
<thead>
<tr>
<th>Function</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frame sway right</td>
<td>Move handle right</td>
</tr>
<tr>
<td>Frame sway left</td>
<td>Move handle left</td>
</tr>
</tbody>
</table>

NOTE: Lock the frame sway by placing the travel select lever in NEUTRAL or applying the service or parking brake.

NOTE: Maximum frame sway is 22° overall or 11° each direction, left and right.

Warning

The forklift includes a Frame Sway Override switch. Improper use of the Frame Sway Override switch could cause death, serious injury, or property damage.

The frame sway feature becomes locked and will not operate when the boom is raised 40° or more. Pressing the Frame Sway Override switch (the trigger) on the control handle will override the lockout feature and allow slow frame sway.

Auxiliary Attachment Control

The Auxiliary Attachment Control lever controls the functions of approved optional attachments that can be mounted to the forklift and require hydraulic supply for operation.

Lights Switch

Flip the toggle switch to ON to turn the front lights on.
Operator Cab

**Boom Angle Indicator**

The boom angle indicator is located on the left side of the boom and is visible from the operator’s seat. Use the boom angle indicator to determine the boom angle when referring to load capacity charts. Refer to the LOAD CAPACITY CHARTS section of this manual for more information.

**NOTE:** The boom angle indicator is a plumb arrow with angular graduations from -5° to +70°

![Boom Angle Indicator](image)

**Frame Level Indicator**

The frame level indicator is mounted on the upper right corner of the operator’s cab. The frame level indicator allows the operator to view if the forklift has been positioned in a level condition.

![Frame Level Indicator](image)

**Boom Extend Letters**

As the boom is extended, the boom extend letters on the left side of the boom are visible to the operator. These letters indicate boom extension as it corresponds to the load capacity charts.

![Boom Extend Letters](image)

**Warning**

DO NOT try to lift or handle heavy components without the use of appropriate lifting equipment.

**Warning**

DO NOT use attachments that are corroded excessively.

- All the attachments should be stored in an appropriate enclosure as to prevent corrosion and deterioration due to environmental conditions.
- Inspect the forklift and the attachments periodically for corrosion.
The XR842 lifting points are shown below. The forklift should only be lifted if lifting points are installed.

**Warning**
Ensure that no one is in the work radius before lifting forklift to avoid crushing hazard.

---

**Forklift Lifting Points**

**Figure 57. XR842 Lifting Points**

The XR842 lifting points are shown below. The forklift should only be lifted if lifting points are installed.

**Warning**
Ensure that no one is in the work radius before lifting forklift to avoid crushing hazard.

---

**MODEL: XR842**

**UNLADEN VEHICLE WEIGHT: 26,850 lbs**

---

**Boom Maintenance Stand (If Equipped)**

The Boom Maintenance Stand is an optional safety equipment used to support the boom during any and maintenance activities where the boom is raised.

- When preparing to set boom stand, make sure machine is on a flat level ground and machine has no load on the forks.
- Raise machine boom to 40 degrees for clearance and remove latch and pin from boom stand weldment.
- Position the boom stand in the upright position and re-
- apply the pin to secure stand.
- Proceed by slowly lowering machine boom to lay on stand.
- When not in use, fold the support down and latch it in place.
- When preparing to remove boom stand, make sure all maintenance has been performed and area is clean.
- Raise machine boom to 40 degrees for clearance and remove pin from stand weldment.
- Lay boom stand in the down position and re-latch stand to secure.
Pre-Operation Inspection

To perform the pre-operation inspection make sure the forklift is NOT running, the engine is cool, the forklift is parked on level ground, the boom is completely retracted, and the frame is level.

NOTE: Copy and use the Pre-Operation Inspection Checklist in this section.

Warning

Wear appropriate protective clothing. Personal protective equipment can include, but is not limited to hardhat, gloves, footwear, safety glasses or goggles, and hearing protection. Make sure clothing is snug and properly belted. DO NOT wear loose clothing, jewelry, watches, or anything that can catch on forklift controls, moving parts, etc. Failure to wear the proper protective clothing could result in death or serious injury.

Perform a pre-operation inspection and functional tests at the beginning of each work shift. Perform the pre-operation inspection first. DO NOT perform the pre-operation inspection with the engine running or hot. Contact with moving or heated parts could cause death or serious injury.

Perform a pre-operation inspection and functional tests in an open area.

Become familiar with all safety and hazard labels, regulations, and procedures. Make sure all proper labels are attached to the forklift and remain legible.

Remove forklift from service and place “Do Not Operate” tags on the Starter switch and steering wheel if anything is found to be in need of repair or maintenance, defective, or unsafe in any way.

Caution

Contact with hot surfaces and the exhaust pipe after the forklift has been operated could result in serious personal injury.

Warning

Always check the condition of the seat belt and mounting hardware before operating the forklift. If the seat belt or mounting hardware is defective, it may not properly restrain the operator, resulting in death or serious injury.

- DO NOT operate the forklift until the seat belt or mounting hardware is replaced, if worn or damaged.
- The seat belt MUST be worn while operating the forklift. Failure to wear the seat belt could result in death or serious injury.

Check hydraulic oil lines, tubes, and hoses carefully. DO NOT use your bare hand to check for leaks. Always use a board or cardboard when checking for a hydraulic leak. Escaping hydraulic fluid under pressure, even a pinhole size leak, can penetrate body tissue, which could cause death or serious injury. If hydraulic oil is injected into your skin, a doctor familiar with this type of injury must treat it immediately.

Serious injury could result from hydraulic oil pressure or hot oil. DO NOT remove a hydraulic tank filler cap unless it is cool enough to touch with bare hands. Remove the hydraulic tank filler cap slowly to relieve pressure. Relieve all pressure in a hydraulic system before any caps, lines, fittings, or related items are disconnected or removed.

Never remove the radiator cap while the engine is hot. The cooling system is under pressure. Hot coolant could cause severe burns or eye injury. Wear protective clothing and safety glasses.
Lead-acid batteries produce flammable and potentially explosive gases. To avoid death or serious injury when checking, testing, or charging batteries:

- DO NOT use smoking materials near batteries.
- Keep arcs, sparks, and open flames away from batteries.
- Provide ventilation for flammable vapors.
- Wear proper personal protective equipment, including safety glasses.

Fluid in electric storage batteries contains sulfuric acid, which is poison and could cause severe chemical burns. Avoid all contact of fluid with eyes, skin, or clothing. Use protective gear when handling batteries. DO NOT tip a battery beyond a 45° angle in any direction.

If contact does occur, follow these First Aid suggestions:

- **External contact** - Flush with water.
- **Eyes** - Flush with water (including under the eyelids) for at least 15 minutes and get medical attention immediately. Flushing must begin immediately to avoid permanent eye tissue damage.
- **Internal contact** - Drink large quantities of water or milk to dilute stomach contents. Do not induce vomiting. Get medical attention immediately.

IMPORTANT - In case of internal contact, DO NOT give fluids that induce vomiting.

---

**California Proposition 65**

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. Wash hands after handling these items.

---

**Warning**

Wear eye protection when starting a forklift with jump start cables. Improper jump start procedures could cause the battery to explode, which could result in death or serious injury.

- Never jump start a frozen battery, as it can explode. Let the battery thaw out before charging.
- NEVER jump start the forklift when travel select lever is in gear, which can cause the forklift to lurch forward or backward, and could result in death, serious injury, or property damage.
- To avoid injury or death when jump starting with another forklift, make sure the two (2) forklifts are not touching.
- DO NOT allow jump start cable ends to contact each other.
- Connect charged battery positive (+) to stalled battery positive (+).
- Connect charged battery negative (–) to stalled forklift ground. Make the connection to the stalled forklift ground last.
- Connect jump start cable to stalled forklift ground a safe distance from the battery to prevent sparks near the battery.
- Jump start only with a power source with the same voltage as the stalled forklift.
- Turn off all lights and accessories on the stalled forklift to prevent them from operating when the power source is connected.
- Electrolyte contains acid and could cause serious personal injury if it contacts the skin or eyes.

---

**Warning**

Tires must have proper ballast. DO NOT replace foam-filled tires with pneumatic tires. Use of pneumatic tires will severely affect forklift load capacity, which could result in death, serious injury, or property damage.

---

**Warning**

Use DEF meeting ISO 22241-1. There is NO acceptable substitute. Using anything other than DEF fluid may result in permanent aftertreatment damage.
Pre-Operation Inspection Checklist

Walk around the ENTIRE forklift while visually performing the pre-operation inspection.

- Check that “Do Not Operate” tags have not been placed on the forklift.
- Check that load capacity charts are legible.
- Check that frame level indicator is working properly.
- Check condition and operation of the seat belt and mounting hardware.
- Check that Operation and Safety Manual is in the protective case and legible.
- Check forks for welds, cracks, misalignment, or any other damage.
- Check that carriage assembly crossbar is straight and in place to prevent forks from changing position or coming off the carriage.
- Check all hydraulic hoses and hose connections for wear or leaks.
- Check tilt cylinder for leaks or any other damage.
- Check boom for straightness or any other damage.
- Check all four (4) tires and wheels for:
  - Punctures, cracks, cuts, gouges, bulges, foreign objects, or any other damage to tires.
  - Loose or missing lug nuts.
  - Bent flanges or any other damage to rims.
- Check front and rear sway cylinders and hoses for leaks or any other damage.
- Check mirrors for cracks, cleanliness, and proper adjustment.
- Check hydraulic reservoir sight gauge for proper fluid level. Add hydraulic fluid, if necessary.
- Check engine compartment for:
  - Loose or damaged belts, hoses, and radiator blades.
  - Coolant reservoir level. Add radiator coolant, if necessary.
  - Engine oil level. Add engine oil, if necessary.
  - Electrical wires and connectors.
- Check transmission fluid level.
- Check front and rear axles for leaks or any other damage.
- Check main boom cylinders and hydraulic lines for leaks or any other damage.
- Check battery terminals for corrosion.
- Check battery for cracked, melted, or damaged case.
- Check electrical connections on rear sway cylinder.
- Check that all labels are legible. Replace any damaged or illegible labels.
- Check that operator’s cab is empty of all trash, debris, or any loose items.
- Check that personal belongings are secured in the personal storage box.
- Check that pedals, and non-skid surfaces are clean and free of grease, oil, dirt, snow, or ice.

Date: __________________________  Initials: __________________________
Perform a pre-operation inspection and functional tests at the beginning of each work shift. Perform the pre-operation inspection first. DO NOT perform the pre-operation inspection with the engine running or hot.

Contact with moving or heated parts could cause death or serious injury.

Perform the pre-operation inspection and functional tests in an open area and away from any other obstacles or equipment. Inspections and functional tests may require assistance. Keep the assistant visible and a safe distance from the forklift to prevent death or serious injury.

If anything is found to be in need of repair or maintenance, defective, or unsafe in any way, remove forklift from service and place “Do Not Operate” tags on the starter switch and steering wheel.

The safety, efficiency, and service life of your forklift will be increased by performing functional tests at the beginning of each shift. If any of the items in the functional tests are not operating properly or within set tolerances, stop the forklift, follow proper shut down procedures, tag the forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift before placing it into service again.

- Operate the boom control handle forward and backward to lower and raise boom.
- Operate the boom control handle left and right to retract and extend boom.
- Operate the attachment tilt thumb stick up and down to tilt the attachment.
- Operate the sway control handle left and right to frame sway left or right.
- Operate the auxiliary attachment control (if an auxiliary attachment is being used).
- Turn work lights on and off.
- Press the horn button to sound the horn.
- Place the travel select lever in reverse to sound the backup alarm.
- Release the parking brake.
- Operate the forklift in forward and reverse.
- Test the service and parking brakes.
  - Apply the service brake pedal after the forklift begins to move and the forklift should stop immediately.
  - Apply the parking brake. The forklift should not move unless the parking brake is released.
- Test each steering function. Operate the forklift in forward and reverse at low idle speed and turn the steering wheel approximately 1/4 turn in each direction for each of the following modes:
  - Align the wheel and set the Steering Select switch to crab steering.
  - Align the wheel and set the Steering Select switch to 2 wheel (2W) steering.
  - Align the wheel and set the Steering Select switch to 4 wheel (4W) steering.
- Check the gauges after the engine warms to the proper operating range.
  - Check the voltage gauge. The voltage gauge should read between 11 and 15 volts.
  - Check the engine coolant temperature gauge. The engine coolant temperature gauge should read between 180 to 200°F.
  - Check the engine oil pressure gauge. The engine oil pressure gauge should read between 40 to 80 PSI.
HOT! DO NOT remove a hydraulic tank filler cap unless it is cool enough to touch with bare hands.
Before Starting Forklift

⚠️ Warning

Failure to use proper safety procedures when mounting and dismounting the forklift could result in death or serious injury.

- Keep steps clear of dirt, mud, snow, ice, debris, and other hazards.
  Face the forklift for mounting or dismounting. Use hand holds and steps to maintain three (3) points of contact at all times, either both hands and one foot or both feet and one hand.
- DO NOT use the controls, steering wheel, or foot pedals as hand holds or steps. Avoid accidentally engaging or disengaging a control.

DO NOT jump from the forklift. Clothing can get caught on pedals, levers, or other protruding parts. Landing on uneven surfaces could result in death or serious personal injury.

1. Master battery disconnect on.
2. Use safe mounting/dismounting procedures to enter the operator cab.
3. Adjust the operator seat for position and comfort. (Refer to Seat Adjustment section in this manual)
4. Adjust mirrors (this may require assistance).
5. Adjust the side console control panel.
6. Fasten seat belt.
7. Make sure the travel select lever is set to NEUTRAL (N) and the Parking Brake is ON (engaged).

**NOTE:** The engine will only start when the travel select lever is in NEUTRAL (N) and the Parking Brake switch is ON (engaged).
Starting Forklift

Normal Starting

⚠️ Warning

To prevent death, serious injury, or property damage, the operator must be seated with seat belt fastened, arms, legs, and head completely inside the Rollover Protection Structure/Falling Object Protection Structure (ROPS/FOPS), the travel select lever in NEUTRAL, and the Parking Brake switch ON (engaged) BEFORE starting the forklift.

1. Place Key in Ignition Switch.

Figure 66. Key and Ignition Switch

2. Disengage the driving unit, or if equipped, put the transmission in NEUTRAL.

3. With the accelerator pedal or lever in the idle position, turn the keyswitch to the ON position.

4. With the Ignition Switch in the ON position, the engine indicator lamps come on momentarily and then go out. The engine indicator lamps include:
   - WARNING (or CHECK ENGINE) lamp, amber in color
   - STOP (or STOP ENGINE) lamp, red in color
   - MALFUNCTION INDICATOR lamp, amber in color.

5. Under cold conditions, the Wait-to-Start lamp (generally a yellow lamp using a symbol similar to the graphic, or the words WAIT TO START) will illuminate at Ignition Switch ON position, and will stay on for a period of up to 30 seconds.

6. Turn key in Ignition Switch clockwise to the START position.

7. Release key immediately after the engine starts. The Ignition Switch will automatically return to RUN.

Figure 67. Turn Key in Ignition Switch to START

Caution

Release the key immediately once the motor starts. If the motor does not start, DO NOT crank the starter motor continuously for more than 15 seconds. Failure to release the key after the motor has started or continuous cranking can damage the starter motor.

NOTE: The Start position is spring-loaded. When the key is released, the ignition switch will automatically return to the RUN position.

Figure 68. Ignition Switch Automatically Returns to RUN

NOTE: If the engine fails to start on the first try, wait until the engine and starter come to a complete stop before cranking the engine again.

8. After the engine starts, allow the engine to idle for approximately 60 seconds.

9. Apply the service brake pedal and disengage the Parking Brake switch.

Caution

The engine must have adequate oil pressure within 15 seconds after starting. If the WARNING lamp indicating low oil pressure has not gone out or there is no oil pressure indicated on a gauge within 15 seconds, shut OFF the engine immediately to avoid engine damage.

10. Idle the engine 3 to 5 minutes before operating with a load. After starting a cold engine, increase the engine speed (rpm) slowly to provide adequate lubrication to the bearings and to allow the oil pressure to stabilize.
Jump Starting

Jump Start or replace the battery of the forklift when the battery is discharged to the point that it will not crank the starter.

⚠️ Warning

Lead-acid batteries produce flammable and potentially explosive gases. To avoid death or serious injury when checking, testing, or charging batteries:

- DO NOT use smoking materials near batteries.
- Keep arcs, sparks, and open flames away from batteries.
- Provide ventilation for flammable vapors.
- Wear proper personal protective equipment, including safety glasses.

Fluid in electric storage batteries contains sulfuric acid, which is poison and could cause severe chemical burns. Avoid all contact of fluid with eyes, skin, or clothing. Use protective gear when handling batteries. DO NOT tip a battery beyond a 45° angle in any direction.

If contact does occur, follow these First Aid suggestions:

- **External contact** - Flush with water.
- **Eyes** - Flush with water (including under the eyelids) for at least 15 minutes and get medical attention immediately. Flushing must begin immediately to avoid permanent eye tissue damage.
- **Internal contact** - Drink large quantities of water or milk to dilute stomach contents. Do not induce vomiting. Get medical attention immediately.

IMPORTANT - In case of internal contact, DO NOT give fluids that induce vomiting.

⚠️ Warning

Wear eye protection when starting a forklift with jump start cables. Improper jump start procedures could cause the battery to explode, which could result in death or serious injury.

- Never jump start a frozen battery, as it can explode. Let the battery thaw out before charging.
- NEVER jump start the forklift when travel select lever is in gear, which can cause the forklift to lurch forward or backward, and could result in death, serious injury, or property damage.

- To avoid injury or death when jump starting with another forklift, make sure the two (2) forklifts are not touching.
- DO NOT allow jump start cable ends to contact each other.
- Connect charged battery positive (+) to stalled battery positive (+).
- Connect charged battery negative (−) to stalled forklift ground. Make the connection to the stalled forklift ground last.
- Connect jump start cable to stalled forklift ground a safe distance from the battery to prevent sparks near the battery.

Caution

Release the key immediately once the motor starts. If the motor does not start, DO NOT crank the starter motor continuously for more than 15 seconds. Failure to release the key after the motor has started or continuous cranking can damage the starter motor.

- Jump start only with a power source with the same voltage as the stalled forklift.
- Turn off all lights and accessories on the stalled forklift to prevent them from operating when the power source is connected.
- Remove the jumper cables in reverse order of their connection (i.e. negative cable ground first, etc.)
- Electrolyte contains acid and could cause serious personal injury if it contacts the skin or eyes.

NOTE: If the engine fails to start on the first try, wait until the engine and starter come to a complete stop before cranking the engine again.

After Extended Shutdown Or Oil Change

Follow the Normal Starting Procedure in this section. The engine will not start until the minimum cranking oil pressure is detected by the ECM. It can take more cranking time to start the engine after an extended shut down or oil change.

Caution

Do not idle for extended periods of time. Excessive idle time can cause poor engine performance.
Operating the Engine

Monitor the oil pressure and coolant temperature gauges frequently. Shut off the engine if any pressure or temperature does not meet the specifications. Continuous operation with engine coolant temperature above or below the engine coolant temperature specifications can damage the engine.

If an overheating condition starts to occur, reduce the power output of the engine by releasing the accelerator pedal or lever or shifting the transmission to a lower gear, or both, until the temperature returns to the normal operating range. If the engine temperature does not return to normal, shut off the engine, and refer to Troubleshooting Symptoms, or contact a Cummins® Authorized Repair Location.

Forklift Travel

Never use crab or four wheel (4W) steering for traveling at high speeds. Use only two wheel (2W) steering for higher speed travel and slow the forklift before turning. Rapid turning using crab, four wheel (4W), or the optional two wheel rear (2WR) steering could cause tip over, which could result in death, serious injury, or property damage.

Check the turning radius around the forklift before making a turn, especially if using four wheel (4W) steering or two wheel rear (2WR) steering, which provide a tighter turning radius. Look over your shoulder in the direction of the turn when backing. Failure to remain aware of your turning radius area could result in death, serious injury, or equipment damage.

Steering Modes

**Warning**

Never use crab or four wheel (4W) steering for traveling at high speeds. Use only two wheel (2W) steering for higher speed travel and slow the forklift before turning. Rapid turning using crab, four wheel (4W), or the optional two wheel rear (2WR) steering could cause tip over, which could result in death, serious injury, or property damage.

**Caution**

DO NOT change steering modes until the forklift slows or comes to a complete stop. Align all four (4) wheels "straight-ahead", or perpendicular to the axle, before changing steering mode. Changing steering modes without aligning all four (4) wheels may result in equipment damage.

The forklift includes three STANDARD modes of steering; Crab, Two Wheel (2W), and Four Wheel (4W) Steering. Use the Steering Select switch located on the dash panel to change steering modes.

**Crab Steering**

Crab steering allows all four (4) wheels to turn in the same direction as the steering wheel, allowing the forklift to move “sideways”. Crab steering is useful in a congested work site to line up to a loading location.

**Two Wheel Front Steering (2W)**

Two wheel (2W) steering allows the front wheels to turn in the same direction as the steering wheel. The rear wheels remain in a fixed forward position. Two wheel (2W) steering is useful for traveling at higher speeds.

**Four Wheel Steering (4W)**

Four wheel (4W) steering allows the front wheels to turn in the same direction and the rear wheels to turn in the opposite direction of the steering wheel. The rear wheels follow the front wheel path. Four wheel (4W) steering is useful for a short turning radius and in muddy or sandy conditions.

**Two Wheel Rear Steering (2WR) - OPTIONAL**

OPTIONAL two wheel rear (2WR) steering allows the rear wheels to turn in the same direction as the steering wheel. The front wheels remain in a fixed forward position.

**NOTE:** A separate switch is located on the right side of the dash panel to engage and disengage the optional two wheel rear (2WR) steering mode.

**Warning**

Allow for adequate clearance between the attachment and other objects when turning. The attachment extends beyond the front of the forklift. The operator must be aware of the maximum sweep of any attachment being used, when turning, to avoid hitting personnel and other objects in the area to prevent death, serious injury, or property damage.

![Figure 69. Maximum Fork Sweep](image)
**Starting Travel**

**Warning**

Use proper safety procedures and avoid hazardous situations while operating the forklift to prevent death, serious injury, or property damage.

- Check the work site for any hazards before operating the forklift.
- Check the work surface for loose soil conditions and overhead power lines.

**Warning**

To prevent death or serious injury, the operator must be seated with seat belt fastened, the travel select lever set to NEUTRAL, the Parking Brake ON (engaged), and the area free of people and obstructions BEFORE starting the forklift.

1. Start the forklift. Refer to the Starting Forklift section in this manual.
2. Apply service brake.
3. Insure that the travel select lever is in NEUTRAL position.
4. Release parking brake.
5. Rotate the gear select switch to the gear desired. Automatic should be selected for normal driving conditions.
6. Move the travel select lever to FORWARD or REVERSE for the appropriate direction of travel.
7. Release the service brake pedal. Slowly press the accelerator pedal to start travel.

**Warning**

DO NOT shift through multiple gears with a single turn of the gear select lever. Allow the engine speed to slow down before shifting to the next lower gear. Improper use of the gear select lever could cause transmission damage or forklift tip over/roll over and could result in death or serious injury.

The transmission has three (3) gears that can be used for traveling in forward or reverse. Automatic should be selected for normal driving conditions.

To shift gears rotate the gear select lever to the next gear while the forklift is traveling.

- Use first gear (1) for highest torque and pulling power.
- Use higher gears for higher ground speed.
- Never travel in top gear (3) when carrying a load.
- Allow the engine speed to slow down before shifting to a lower gear.

**Warning**

A fault condition may trigger a pop-up dialog box on the display describing the nature of the fault during operation. Corresponding red or amber warning lights will illuminate to indicate the severity of the fault. If an Engine Shutdown fault condition is present, stop the forklift, follow proper shut down procedures, tag the forklift with “Do Not Operate” tags, and have a qualified mechanic service or repair the forklift BEFORE placing it into service again. Report all warning indicators and fault codes to a qualified mechanic. Ignoring warning indicators or fault codes can cause improper performance, which could result in death, serious injury, or property damage.

Fault condition dialog boxes will pop up and warning lights on the display will illuminate during critical circumstances. Some of these conditions demand immediate attention and forklift servicing. If an Engine Shutdown fault condition is present, the forklift should be shut down as soon as practical to prevent serious mechanical failure. For more information refer to “Display Indicators” section on page 37.

Some of the following indicators are green while the engine is within normal operation range, turning yellow when the normal operating range is exceeded. Some of these indicators turn red and become warnings when a particular parameter reaches or exceeds a critical level.

- Battery Voltage Indicator, between 11.5 to 12.5 V. Normal operating range: 12.6-14V
- Battery Voltage Warning, below 11.5 V
- Coolant Temperature Indicator, between 205 and 215°F. Normal operating range: 180 to 205°F
- Coolant temperature Warning, above 216°F
### Operation

**Fuel Level Indicator**, between 10 and 20% fuel left in the tank

**Low Fuel Level Warning**, below 10%

**High Hydraulic Temperature Indicator**

**Low Brake Pressure Warning**

**Low Oil Pressure Warning**. *Engine must be running above 500 RPM*. It turns red below 10 psi

**Low Oil Pressure Indicator**, between 10 and 20 psi. *Engine must be running above 500 RPM*

**Low Oil Pressure Warning**, below 10 psi

**Rear Axle Centered**

**Rear Axle Locked**

**Service Reminder**

**Transmission Temperature Indicator**, between 215 and 224 °F

**Transmission Temperature Warning**, above 225 °F

**Wait To Start Indicator**

**Water In Fuel Indicator**

### Stopping Travel

1. Stop the forklift by applying the service brake pedal.
2. Slow the forklift until it comes to a complete stop.
3. Move the travel select lever to NEUTRAL (N).
4. Set the parking brake to ON (engaged).

#### Warning

To prevent death, serious injury, or property damage, apply service brakes until the forklift comes to a complete stop, move travel select lever to NEUTRAL (N), set the Parking Brake switch to ON (engaged), lower and retract the boom, and shut off the engine before exiting the forklift.

### Shut Down Procedure

Failure to follow the correct shutdown procedure may result in damage to the turbocharger and shorten the turbocharger life.

1. Park forklift on level ground, if possible.
2. Stop the forklift by applying the service brake pedal.
3. Place the travel select lever in NEUTRAL (N) and set the parking brake to ON (engaged).
4. Lower the boom and rest carriage on ground.
5. Allow the engine to idle 3 to 5 minutes before shutting it off after a full-load operation. This allows adequate cool down of pistons, cylinders, bearings, and turbocharger components.

**NOTE:** The engine is equipped with an electronic control module (ECM). Ensure the Ignition Switch is turned off for a minimum of 100 seconds prior to disconnecting the continuous (unswitched) battery power supply. If the unswitched battery power supply is disconnected in less than 100 seconds after the Ignition Switch is turned off active fault codes and incorrect ECM information can occur.

6. Turn the ignition key to OFF and remove the key.
7. If the forklift is parked on an incline, block the wheels.

### Changing Travel Direction

1. Stop the forklift by applying the service brake pedal.
2. Move the travel select lever to FORWARD or REVERSE.

#### Warning

Make sure the forklift comes to a complete stop before moving the travel select lever. A sudden change in direction of travel, while carrying a load, can reduce stability and/or cause the load to shift or fall, which could result in death, serious injury, or property damage.
**Refueling**

⚠️ **Warning**

Engine fuel is flammable and can cause a fire or explosion resulting in death or serious injury. DO NOT smoke while refueling and keep sparks and open flames away from the forklift.

**NOTE:** The fuel tank capacity is 48 gallons.

- Make sure the forklift is level to obtain an accurate fuel level reading.
- Shut off the engine.
- Ground the fuel nozzle against the filler neck to avoid sparks.

**Fuel Types**

Use ASTM #2 diesel fuel with a minimum Cetane rating of 40 for better fuel economy and performance under most operating conditions.
- Use standard #2 diesel fuel for operating at temperatures above 32°F (0°C).
- Use a blend of #1 and #2 diesel fuel (“winterized” #2 diesel) for operating at temperatures below 32°F (0°C).
- Fuels with Cetane ratings higher than 40 may be needed in higher altitude or in an extremely low temperature climate to prevent hard starts and excessive smoke.

**Engine Protection System**

The engine is equipped with an engine protection system. The system monitors critical engine temperatures and pressures, and logs diagnostic faults when an over or under normal condition occurs. If an out-of-range condition exists and engine derate action is to be initiated, the operator is alerted by an in-cab WARNING lamp.

The STOP ENGINE Indicator blinks or flashes when out-of-range conditions continue to worsen. The driver must pull to the side of the road or to a safe area when it is safe to do so, to reduce the possibility of engine damage.

**NOTE:** Engine power and speed will gradually be reduced, depending on the level of severity of the observed condition. The engine protection system will not shut down the engine unless the engine protection shutdown feature has been enabled.

---

**Pintle Hook**

Death or serious injury could result from improper operation when using tow connection. Do not elevate boom above 30 degrees when towing. Do not exceed rated tow capacity (500 lbs vertical load, 5,000 lbs tow capacity).

The Pintle Hook is used for towing trailers and equipment, rated at or below 5,000 lbs maximum capacity. Failure to comply with this capacity limitation, or elevating the boom above 30 degrees when towing could result in death or serious injury.

---

**Attachments**

**Attachment Disclaimer**

⚠️ **Warning**

DO NOT exceed the manufacturer’s rated load for any auxiliary attachment. Any attempt to lift or carry loads in excess of the manufacturer’s rated load may cause forklift tip over, loss of load, or structural damage which could result in death, serious injury, or property damage.

Xtreme Manufacturing makes no representations or warranties, expressed or implied, as to the design, manufacture, or fitness for use with this forklift of any third party attachment. This forklift is not intended to be used and should not be used with an attachment that would alter the center of gravity or stability of this forklift. Xtreme Manufacturing assumes no liability for any third party attachment that would alter the center of gravity or stability.
Standard Carriage Operation

The standard carriage uses manually adjustable forks and can be tilted up or down by using the thumb stick on the control handle.

Fork Positioning Carriage Operation

Do not adjust forks when Fork Positioning Carriage is loaded. Adjusting forks when carriage is loaded may result in loss of load or carriage damage. Always use the Fork Positioning control handle to adjust the forks BEFORE loading the carriage.

Fork Ratings

DO NOT exceed forklift capacity of 10,000 lbs. The total rated capacity of the forks being used must equal or exceed forklift capacity. Forks can break causing loss of load and could result in death or serious injury.

All approved forks for this forklift are marked with a maximum load capacity rating (A). This rating is stamped on the left edge of the fork just below the fork pivot shaft. The rating listed is in pounds and is based upon a 24 inches load center (B). This rating specifies the maximum load capacity that the individual fork can safely carry at a maximum load center of 24 inches.

Because forks are always used in multiples, the total rating of any combination of forks will be the sum of their rated capacity. Other than block forks, all forks should be used in matched pairs. Block forks should be used in matched sets.

The maximum load capacity for this forklift is 10,000 lbs. The matched pair or set of forks used on this forklift should have total load ratings which equal or exceed 10,000 lbs. When the load rating of the forklift differs from the load capacity of the forks, the lower value becomes the overall load capacity.
Quick Attach System

This forklift includes a quick attach system that allows for easy attachment changes. Perform attachment connection and removal procedures on level ground.

Attachment Connection

**Warning**

Improper connection of an auxiliary attachment can result in death or serious injury. Attachments not locked into place could become unstable and fall on the operator or other personnel near the forklift, which could result in death or serious injury.

To move the forks outward, press the top button (1) on the front control handle, or move the auxiliary handle (3) to the left. To move the forks inward, press the lower button (2) on the front control handle, or move the auxiliary handle (3) to the right (figure 69).

**Warning**

Hydraulic attachments have a maximum hydraulic pressure rating. Failure to make sure the attachment is equipped with a pressure reducing valve, or is rated to be equal or greater than 3,500 psi, which is the maximum pressure of the forklift auxiliary hydraulic system at the quick-disconnect couplers, could result in death or serious injury.

When the auxiliary attachment control lever is moved right or left it activates hydraulic pressure through the quick attach couplers (A) and (B) to move the carriage.

- Make sure attachment locking devices are always in place.
- DO NOT operate the forklift until you have positive indication that the carriage attachment is fully engaged.

1. Position the forklift directly behind the attachment. **NOTE:** Allow enough distance to extend the boom approximately 18 to 20 inches.
2. Tilt the quick attach adapter forward.
3. Extend the boom and/or drive the forklift forward until the pivot pins (A) are below and between the two (2) attachment hooks (B).

4. Raise the boom until pivot pins (A) have seated fully in attachment hooks (B).

5. Tilt the attachment up slightly. The quick attach adapter should be tight against the rear of the attachment. Align the holes between the quick attach adapter and attachment.
6. Raise the quick attach lock lever.

7. With lock lever raised, insert quick attach pin completely through the attachment and quick attach adapter.

---

**Warning**

Hydraulic attachments have a maximum hydraulic pressure rating. Failure to make sure the attachment is equipped with a pressure reducing valve, or is rated to be equal or greater than 3,500 psi, which is the maximum pressure of the forklift auxiliary hydraulic system at the quick-disconnect couplers, could result in death or serious injury.
9. Connect the quick attach couplers (this only applies to attachments with a quick attach hydraulic system).

[Image of quick attach couplers]

Figure 81. Quick Attach Couplers For Hydraulic Systems. (A) Female Coupler. (B) Male Coupler.

7. Raise the quick attach lock lever.

[Image of quick attach lock lever being raised]

Figure 83. Quick Attach Lock Lever

8. Pull out the quick attach pin at the bottom of the quick attach adapter.

[Image of quick attach pin being pulled]

Figure 84. Pull Quick Attach Pin from Attachment and Quick Attach Adapter.

Attachment Removal

NOTE: To remove a standard carriage with forks, spread the forks apart on the carriage shaft. This provides adequate support for the carriage to stand alone.

1. Bring the forklift to a complete stop.

2. Move the travel select lever to NEUTRAL (N).

3. Set the parking brake switch to ON (engaged).

4. Extend the boom approximately 18 to 20 inches.

5. With the attachment 10”-12” off of the ground, tilt the attachment backward.

6. Disconnect the quick attach couplers (this only applies to attachments with a quick attach hydraulic system).

[Image of quick attach pin]

Figure 82. Quick Attach Couplers For Hydraulic Systems. (A) Female Coupler. (B) Male Coupler.

8. Pull out the quick attach pin at the bottom of the quick attach adapter.

[Image of quick attach pin being pulled]

Figure 84. Pull Quick Attach Pin from Attachment and Quick Attach Adapter.

9. Lower the attachment to the ground in a level position.

[Image of attachment being lowered]

Figure 85. Lower Attachment to Ground in Level Position.
10. Tilt and lower boom until pivot pins (A) have disconnected from attachment hooks (B).

Figure 86. Tilt and Lower Boom to Release Pivot Pins (A) from Attachment Hooks (B).

11. Retract the boom to fully disconnect the attachment from the quick attach link.

---

**Operation**

- Remain at least 10 feet, plus an additional 0.4 inches for each 1,000 volts over 50,000 volts, from active power lines and other power sources.
- Work site operating directives and/or local or state codes might require a greater distance.
- Know the maximum height and reach of this forklift.

---

**Warning**

Failure to follow proper safety procedures when lifting, lowering, and traveling with a load could cause death, serious injury, or property damage.

DO NOT exceed forklift capacity of 10,000 lbs. The total rated capacity of the forks being used must equal or exceed forklift capacity. Forks can break causing loss of load and could result in death or serious injury.

---

**Warning**

DO NOT exceed the manufacturer’s rated load for any auxiliary attachment. Any attempt to lift or carry loads in excess of the manufacturer’s rated load may cause forklift tip over, loss of load, or structural damage which could result in death, serious injury, or property damage.

Failure to keep personnel clear of the load area while the load is being raised or lowered could result in death or serious injury. DO NOT lift, swing, or move a load over anyone or over a forklift cab.

- Review the rated load capacity of each auxiliary attachment before performing any operation.
- Use the correct load chart and NEVER exceed specified weights and load centers.
- DO NOT exceed the manufacturer’s recommended load capacity.
- DO NOT operate the forklift with an unsafe load distribution.

---

**Caution**

Use caution when operating the forklift during storms or strong winds.

---

**Load Handling**

- Never operate the forklift in an area where active overhead power lines, overhead or underground cables, or other power sources exist.
- Contact the appropriate power or utility company to de-energize power lines or take other suitable precautions.

---

**Danger**

Death or serious injury by electrocution will result from contact with or inadequate clearance with energized power lines or apparatus.

---

**Warning**

Keep the forklift, attachments, and loads a safe distance from electrical power lines.
• Adjust the load as necessary, especially for nonstandard loads.
• Use caution when handling loose material that can fall into the cab.
• Remove overhanging load materials, when possible, and watch for sliding material.
• DO NOT reach a load over posts or other objects that can enter the cab, if tipped.
• Avoid sudden stops, starts, or turns.
• Avoid carrying a swinging load. If necessary, secure the load by attaching it to the forklift tie-downs and/or have another person assist with safely steadying the load.

### Suspended Loads

Avoid carrying a suspended load. If necessary, secure the load by attaching it to the forklift tie-downs and/or have another person assist with safely steadying the load. The handling of suspended loads can introduce dynamic forces drastically affecting the stability of the forklift. Grades and sudden starts, stops, and turns can cause the load to swing and create a hazard if not stabilized. Swinging loads can become unstable, and could cause death, serious injury, or property damage.

1. Do not exceed the load capacity of the forklift (as noted on the load chart).
2. Only lift the load vertically, and never drag it horizontally.
3. Transport the load with the bottom of the load and the boom as low as possible.
4. With the load elevated, move the forklift slowly and cautiously. Only move the forklift to the extent needed to raise, transport, and place the load.
5. Use guy lines to restrain load swing if possible.

### Boom Lift Point

**Warning**

DO NOT exceed rated capacities. Any attempt to lift or carry loads in excess of those shown on the load capacity charts could cause forklift tip over, loss of load, or structural damage which could result in death, serious injury, or property damage.

There is boom lift point on the underside of the boom that may be used to lift and carry loads.

There is a dedicated boom lift point load chart on the forklift, which should be referenced when using the boom lift point. Refer to the suspended loads section of this manual when handling suspended loads for specific warnings and instructions unique to this type of operation.

### Pick Up A Load

1. Use correct load chart to review the rated load capacity of the auxiliary attachment being used. NEVER exceed specified weights and load centers.
2. Approach the load slowly and squarely with the fork tips straight and level.
3. Adjust the spacing of the forks so they engage the pallet or load at its maximum width. NEVER use just one fork to lift a load.
4. Tilt the attachment forward so the forks hang freely on the fork shaft.
5. Insert forks under the load until the load is against the fork frame. Load should be supported in such a manner that the forks can be positioned in a resistance free manner.
6. Tilt the forks back, and raise the boom slightly to secure the load.
Operation

**Carry A Load**

1. Carry the load as low as possible while maintaining good ground clearance and visibility.
2. Back away slowly.
3. To travel with a load, use first gear (1) for highest torque and pulling power. NEVER travel in higher gears when carrying a load.

**Place A Load**

1. Before placing the load, refer to the appropriate load capacity chart to determine safe boom extension range.
2. Set the Parking Brake switch to ON (engaged).
3. Use the frame sway control to level the forklift. For additional information, refer to the Frame Leveling section in this manual.

**Load Shift**

1. If the load shifts, stop the forklift immediately.
2. Lower and adjust the load to center its weight.
3. If the load shift is too great for adjustment, rearrange the load before attempting to move the forklift.

**Elevating Personnel**

**Warning**

Use of the frame sway control with the boom raised above horizontal could cause tip over resulting in death or injury. Always use the frame sway control to level the forklift BEFORE raising the boom above horizontal. If the forklift cannot be leveled using the frame sway control, do not attempt to raise or place load. Reposition forklift or have the surface leveled.

4. Align the forks at the level the load is to be placed.
5. Extend the boom slowly until the load is just above the area where it is to be placed.
6. Lower the boom until the pallet rests in position and the forks are free to retract.
7. Retract the forks slowly from under the load.

**Warning**

Exercise caution when moving objects containing liquids, as the load may shift during lifting and handling.

Use only a compliant work platform to lift or lower personnel. Never drive the forklift with the work platform in a raised position or with personnel on board, even for a short distance. Doing so could result in death, serious injury, or property damage.

Please refer to ANSI/ITSDF B56.6 for additional design and operating information regarding elevating personnel.

**Design Requirements For A Personnel Platform:**

1. Platform floor must have a slip resistant surface located not more than 8” above the normal load supporting surface of the fork.
2. Platform floor dimensions shall not exceed two times the load center distance. This floor dimension is measured parallel to the longitudinal center pane of the forklift.
3. Platform floor width shall not be greater than the overall width of the forklift, measured across the load bearing tires, plus 10” on each side.
4. Minimum space requirements for each person on the platform shall not be less than 18” in either direction.
5. Minimum 4” height toe plate around the perimeter of the platform which may be omitted at the access opening.
6. On the overhead protection device, when requested by the user.
7. Protection must be provided for the personnel in their normal working position on the platform from moving parts of the rough terrain forklift that represent a hazard.
8. Information prominently indicated on the platform;
   A) Maximum work load including personnel and equipment.
   B) Weight of empty platform.

9. Provide a means so that the platform can only be centered laterally on the forklift and retained against the vertical face of the forks, carriage, or lifting mechanism.

10. Provide a means to securely attach the platform to the lifting mechanism, and to prevent the platform from inadvertent pivoting.

11. Provide restraining means for securing personnel such as an anchorage for attaching the lanyard of a body belt or harness.

12. Provide a guardrail or similar structure with a nominal height to the platform of 42" around its upper periphery and include a mid rail. It may be hinged, removable, or of chains, and used if proper positioning is easily discernible.

Such restraining means shall be capable of withstanding a concentrated horizontal force of 200 lbs applied at the point of least resistance without permanent deformation. A body belt and lanyard is to have an attachment point provided for freedom of movement, and its length is limited to a free-fall of 5 feet, measured from the point of attachment to the operator. The complete system shall be capable of withstanding three consecutive drop test to simulate a 250 lbs person free falling 6 ft. without allowing the test weight to fall free to the ground. A deceleration device may be included.

13. Lanyards shall be arranged so as not to cause a tripping hazard.

14. Body belts should have a width of at least 1.75".

15. Structural safety factor - all load supporting structural elements of the work platform shall have a structural safety factor of not less than 2 to 1 based on the minimum yield strength of the material used.

**Capacity Limitations:**

The combined weight in lbs of the platform, load, and personnel shall not exceed 33% of the capacity of the related load center position indicated on the machine load chart.

**Preparation and Set-Up:**

1. **DO NOT** alter or modify the work platform in any manner that is detrimental to its safe use.

2. Make sure that the work platform is securely attached to the quick attach or forks. Follow the platform manufacturer's instructions.

3. Make sure the platform, carriage, and forks are secured to prevent them from pivoting from side to side.

4. On side tilt or swing carriage, the carriage must be centered and/or leveled horizontally and vertically. The hydraulic system quick disconnects must also be disconnected and the carriage securely fastened to prevent any tilting or side to side swinging motion.

5. Ensure the forklift has a firm footing and is level.

6. Be sure the forklift is in a level position (side to side) before any operation is begun. Use the frame sway to level the forklift. If the forklift cannot be leveled, reposition the forklift.

7. Place the travel select lever in the NEUTRAL position.

8. Engage the parking brake switch. Blocking the wheels is also recommended.

9. Level the platform in both the side-to-side and front-to-back directions before use.

10. Before lifting or lowering personnel, be sure the forklift lifting mechanism operates smoothly through the entire lifting and lowering of the platform and maintains its self-leveling function. The forklift must operate smoothly both empty and loaded.

11. Lift and lower personnel smoothly, with caution, and only at their request.

12. Keep hands and feet clear of controls other than those in use.

13. Be certain that the path of platform travel is clear of hazards, e.g., storage racks, scaffolds, overhead obstructions, and electrical wires.

14. Be sure any lift limiting devices and latches are functioning properly.

15. A trained operator shall be in position to control the forklift. When the operator is not in the operating position, block the wheels and apply the parking brake with all controls in neutral.

16. Alert elevated personnel before moving the platform. Then move the platform smoothly and with caution.
17. Always lower the platform if you must move the forklift for adjustment in positioning.

18. Be certain that personnel and equipment on the platform do not exceed the available space.

19. Any body belt, lanyard, or deceleration devices which has sustained permanent deformation or is otherwise damaged shall be replaced.

20. Use of railings, planks, ladder, etc. on the platform for purpose of achieving additional reach or height is prohibited.

21. Before elevating personnel, the area around and under the work platform should be marked to warn anyone on the ground that overhead work is being done.

22. The platform shall be lowered to ground level for personnel to enter and exit. Personnel shall not climb on any part of the rough terrain forklift in attempting to enter and exit.

23. Protection must be provided for the personnel on the work platform from pinch points or moving parts while in their normal working position on the platform.

24. Provide overhead protection device as required by work site conditions or if requested by the user of the platform.

**Load Capacity Charts**

**Warning**

DO NOT exceed rated capacity. Any attempt to lift or carry loads in excess of those shown on the load capacity charts could cause forklift tip over, loss of load, or structural damage which could result in death, serious injury, or property damage.

All load ratings shown on load capacity charts are based on the forklift being on firm, level ground, the forks being evenly positioned on the carriage, the load being centered on the forks, properly sized tires properly inflated and/or foam filled, and the forklift being in good operating condition.

Load capacity charts, located on the left side of the dash panel, are provided to assist the operator in determining how to safely operate the boom to pick up, carry, and set down a load with the forklift, including what angle, how high, and how far to extend the boom.

**Using Load Capacity Charts**

The forklift includes two (2) indicators to assist the operator for accurately using the load capacity charts. These indicators are the Boom Extend Letters and the Boom Angle Indicator.

Boom extend letters are located on the left side of the boom and visible to the operator as the boom is extended. These letters indicate boom extension as it corresponds to the load capacity charts.

**NOTE:** For example, when letter “A” first appears, the boom extension corresponds to the arc of line “A” throughout all the load capacity charts.

The boom angle indicator is located on the left side of the boom and is visible from the operator’s seat. Use the boom angle indicator to determine the boom angle when referring to load capacity charts.
NOTE: The boom angle indicator is a plumb arrow with angular graduations from -50° to +70°.

Figure 90. Boom Angle Indicator.

Reading Load Capacity Charts

To accurately read the load capacity charts, you must determine three (3) things:

- Weight of the load being lifted
- Height of structure where load is to be placed
- Distance from front tires where load will be placed

For example:

1. The operator determines load weight and makes sure load does not exceed fork, attachment, or boom capacity.

   The load is 3,000 lbs.

2. The operator safely moves the load to a loading position.
   - Places forks under load
   - Tilts and raises load safely
   - Fully retracts boom
   - Drives forklift to position perpendicular to structure
   - Levels the forklift

3. The operator determines height of structure where load is to be placed.

   The structure height is 30 feet from ground level.

4. The operator determines distance from front tires where load will be placed.

   The distance in front of forklift where load will be placed is 20 feet.

5. Operator reads load capacity chart for attachment carriage to learn it will be safe to place the load at any boom angle with the boom extend letter “E” showing.

Figure 91. Load Capacity Chart.
Frame Leveling

**Warning**

Use of the frame sway control with the boom raised above horizontal could cause tip over resulting in death or injury. Always use the frame sway control to level the forklift BEFORE raising the boom above horizontal. If the forklift cannot be leveled using the frame sway control, do not attempt to raise or place load. Reposition forklift or have the surface leveled.

The frame sway control handle has variable motions from the center that control frame sway (right and left).

<table>
<thead>
<tr>
<th>Frame Sway Functions</th>
<th>Control Handle Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>FRAME SWAY RIGHT</td>
<td>Move control handle RIGHT.</td>
</tr>
<tr>
<td>FRAME SWAY LEFT</td>
<td>Move control handle LEFT.</td>
</tr>
</tbody>
</table>

**Warning**

The reach forklift includes a Frame Sway Override switch. Improper use of the Frame Sway Override switch could cause death, serious injury, or property damage.

The frame sway feature becomes locked and will not operate when the boom is raised 40° or more. Applying service brake, parking brake, and placing travel select lever in NEUTRAL, then pressing the Frame Sway Override switch (the trigger on the Front Control handle) will override the lockout feature and allow frame sway.

Figure 92. Frame Sway Control Handle.

The frame sway control handle controls the frame sway (right and left) functions.

To lock the frame sway, place the travel select lever in NEUTRAL or apply the service or parking brake.

NOTE: Maximum frame sway is 22° overall or 11° each direction, left and right.

A frame level indicator is mounted on the inside upper right corner of the operator’s cab. The frame level indicator allows the operator to view if the forklift has been positioned in a level condition. Always frame sway the forklift right or left until the indicator shows 0° (level).

Figure 93. Frame Level Indicator.

Figure 94. Frame Sway Override Switch.
Establishing a Maintenance Program

The hour meter displays elapsed engine operating hours and has a total readout of 9,999.9 hours. Use the hour meter and the schedules contained in this section to establish a comprehensive preventive maintenance program.

![Figure 95. Hourmeter](image)

Maintenance Schedule

Every Day or 8 Hours of Operation

- All items from Pre-Operation Inspection Checklist
- Crankcase Breather Tube
- Fuel-Water Separator
- Lubricating Oil Level
- Coolant Level
- Fan, Cooling
- Drive Belts
- Air Cleaner Restriction
- Dust Ejection Valve
- Air Intake Piping

After First 50 Hours of Operation

- Change engine oil and filters
- Check air filter (replace if necessary)
- Replace fuel filter and pre-filter
- Check engine hoses and connections for leaks, damage, and tightness
- Check radiator hoses for leaks, damage, and tightness
- Check electrical cables, leads, and connections for damage and tightness

After Every 250 Hours of Operation or 3 Months

- Check for oil and coolant leaks
- Check condition and tension of drive belts (use tension meter to check belt tension)
- Lubricate front and rear drive shaft grease fittings
- Lubricate outrigger pivot point grease fittings
- Lubricate front and rear axle grease fittings
- Change differential oil
- Change wheel-end oil
- Check wheel lug nuts torqued to 380-420 ft-lbs
- Lubricate boom pivot point grease fittings
- Lubricate front and rear axle cylinder pivot point grease fittings
- Lubricate boom roller grease fittings and chains
- Replace hydraulic return line filter
- Replace transmission filter and top off fluid, as required
- Lubricate boom pivot point grease fittings
- Lubricate front and rear axle cylinder pivot point grease fittings

After Every 500 Hours of Operation or 6 Months

- Replace air filters
- Replace fuel filters
- Check cooling system antifreeze
- Check engine hoses and connections for leaks, damage, and tightness
- Check radiator hoses for leaks, damage, and tightness
Preventive Maintenance

- Check cooling fan belt tensioner
- Check specific gravity of engine coolant
- Replace transmission fluid and filters and perform the required transmission calibration
- Replace hydraulic reservoir air breather
- Replace hydraulic return line filter
- Replace hydraulic high-pressure filter

After Every 1,000 Hours of Operation
- Comply with 50-Hour Maintenance Requirements
- Comply with 250-Hour Maintenance Requirements
- Comply with 500-Hour Maintenance Requirements
- Change hydraulic fluid
- Change differential oil
- Inspect boom chains

After Every 2,000 Hours of Operation
- Comply with 50-Hour Maintenance Requirements
- Comply with 250-Hour Maintenance Requirements
- Comply with 500-Hour Maintenance Requirements
- Comply with 1000-Hour Maintenance Requirements
- Change wheel-end oil
- Change differential oil
- Inspect boom chains

After Every 4,000 Hours of Operation
- Drain and flush cooling system

Engine Diagnostic Fault Codes

The electronic engine control system displays and records certain detectable fault codes. The fault codes are retained in the ECM until cleared by the user.

There are two types of diagnostic fault codes:

- Engine electronic control system fault codes inform the operator that there is a problem with the control system that requires troubleshooting.
- Information and engine protection fault codes inform the operator that the control system has detected an engine condition outside the normal operating range.

All fault codes recorded will either be active (fault is presently active on the engine) or inactive (fault was active at some time, but is not presently active).

If encountered, all fault codes will automatically pop-up on the display.

These fault codes can be accessed using the electronic service tool or by using the ENGINE DIAGNOSTICS menu.

Pressing the ENGINE DIAGNOSTICS soft button will display engine information and existing fault codes. Use the up/down buttons to navigate Pressing the MENU button will return to the GAUGE DISPLAY mode.

NOTE: The equipment must be stationary. If road speed is detected, the flashing sequence will not occur.

CLEAR ALL FAULTS

Pressing the CLEAR ALL FAULTS soft button will remove all faults displayed.
Preventive Maintenance

**Boom Emergency Lower Down Valve**

Both of the lift and extend cylinders are equipped with a needle valve which allows the cylinder to retract without the direct assist of the machine's hydraulic power. This feature is intended to be used only in the event of total loss of engine or hydraulic pump failure with an elevated boom.

In any event, the forklift should be secured until the situation has been properly evaluated. Secure the forklift and area by following the procedures below:

1. Clear the area around the forklift of all personnel.
2. Place the shift lever in NEUTRAL and engage the parking brake switch to the ON position.
3. Section off a large area under the boom with tape to restrict any personnel from entering this potentially dangerous area.
4. If the load is in a position where it can be removed safely, completely remove the load from the carriage and/or attachment. Otherwise leave the load in place.
5. Remove boom access cover on back of boom.

6. Locate needle valve on extend cylinder. Loosen nut on valve, then loosen valve with hex wrench.

7. Fully retract boom with control handle in cab.
8. When boom is fully retracted, tighten valve with hex wrench, then tighten nut to secure valve.
9. Locate needle valves on lift cylinders. Loosen nut on valve, then loosen valve with hex wrench (lower right valve as shown in Figure 98). Repeat for both sides.

**NOTE:** DO NOT touch the top left valve (inset, below)

10. Fully lower boom with control handle in cab.
11. When boom is fully lowered, tighten valve with hex wrench, then tighten nut to secure valve (repeat for both sides).
Lockout / Tagout

Do Not Operate - Accident Prevention Tags

Before beginning any maintenance or service, place a Do Not Operate Tag on both the starter key switch and the steering wheel, stating that the forklift should not be operated. Do Not Operate Tags, which can be cut out and used, are included at the end of this manual. Retain these Tags for use at a later date.

New or Additional Operators

At the time of original purchase, the purchaser of this forklift was instructed by the seller on its proper use. If this forklift is to be used by an employee or is loaned or rented to someone other than the purchaser, make certain that the new operator is trained, in accordance with OSHA regulations, and reads and understands this Operation & Safety Manual before operating the forklift.

In addition, make sure that the new operator has completed a walk-around inspection of the forklift, is familiar with all the labels on the forklift, and has demonstrated the correct use of all controls.

Lockout/Tagout Procedure

Perform the following procedure to lockout and tag out the forklift. This procedure, requiring a lock, and danger tags are to be used whenever the forklift is unsafe for operation or maintenance.

Removing Forklift From Service

1. Attach “DO NOT OPERATE” tags to steering wheel and ignition key.
2. Open battery access cover.
3. Set battery disconnect switch to OFF.
4. Lock battery disconnect switch.
5. Attach “DO NOT OPERATE” tag to battery disconnect switch.

Warning

If forklift is unsafe for operation or maintenance, the defect or defects must be clearly documented and posted in a conspicuous place on the forklift. Failure to comply could result in death, serious injury, or property damage.

Return Forklift to Service

When the forklift has been repaired and made safe for operation and maintenance, perform the following procedure to return forklift to service.

1. Remove lock and “DO NOT OPERATE” tag from battery disconnect switch.
2. Close battery access cover.
3. Remove “DO NOT OPERATE” tags from steering wheel and ignition key.
Do Not Operate Tags

DANGER
DO NOT OPERATE

DANGER
DO NOT OPERATE
Xtreme Manufacturing Product Warranty Policy

1) Xtreme Manufacturing warrants, its authorized sales and service centers (herein referred to as “SSC”), new product(s) the mainframe and chassis weldments shall be free from defects in material and workmanship for the period of 10 years or 10,000 hours whichever comes first. The boom weldment and boom rollers shall be free from defects in material and workmanship for the period of 5 years or 5,000 hours whichever comes first. The powertrain assemblies consisting of engine, transmission and drive axles and all other components not listed above shall be free from defects in material and workmanship for the period of 2 years or 2,000 hours after date of delivery. This warranty is made to the original owner of the new product(s) and is transferable for the duration of the coverage period, to the subsequent owner with prior written approval from Xtreme Manufacturing (see limitations).

2) Machines may be held in an authorized Distributor/SSC’s stock for a maximum period of six (6) months from the date of shipment from Xtreme, before the warranty period is automatically initiated on each machine.

3) It is the responsibility of the Distributor/SSC to complete and return to Xtreme Manufacturing a Pre-delivery Inspection Record, Warranty Registration Form, before the act of rental / loan / demonstration of the machine or delivery to an end user. In the case of direct sale to end customers the same responsibility lies with the end customer.

4) Any end customer, SSC, distributor or dealer shall not be entitled to the benefits of this warranty and Xtreme Manufacturing shall have no obligations hereunder unless the “Pre-Delivery and Inspection Record” has been properly completed and returned to the Xtreme Manufacturing Warranty department within fifteen (15) days after delivery of the Xtreme Manufacturing product to the Customer or Dealer’s demonstration / rental fleet. Xtreme Manufacturing must be notified, in writing, within ten (10) days, of any machine sold to a Customer from a Dealer/SSC’s rental fleet during the warranty period.

5) Any part or parts which upon examination by the Xtreme Product Support Department are found to be defective within the specified warranty period, will be replaced or repaired at the sole discretion of Xtreme Manufacturing, through its local Authorized Distributor/SSC, at no charge. Any parts replaced under warranty must be original Xtreme parts obtained through an authorized Xtreme Manufacturing Distributor/SSC unless expressly agreed otherwise in writing and in advance by Xtreme Manufacturing’s warranty department.
Xtreme Manufacturing Product Warranty Policy

6) All parts claimed under warranty must be held available for return and inspection upon request for a period of 90 days from date of claim submission, it is necessary that all parts are individually tagged or marked with their part number and the warranty claim number. All parts returning should be still in a factory state, free of any alteration to the original design. If the parts are subject to repair it will need to be pre-authorized by the Xtreme Product Support Group and or Warranty Department prior to the repair being completed. After 90 days all parts replaced under warranty which have not been returned, to Xtreme Manufacturing should be destroyed. Failure to produce parts requested by the Warranty Administrator for inspection within a period of 14 days will result in the claim being automatically rejected in full. Materials returned for warranty inspection must have the following procedure:

Carefully packaged to prevent additional damaged during shipping
Drained of all contents and all open ports capped or plugged
Shipped in a container tagged or marked with the RMA number
Shipped PREPAID (ground service only). Any item(s) returned for warranty by any other means may be refused and returned, unless prior approval is agreed with Xtreme.

7) At the direction of the Xtreme Manufacturing Warranty department, any component part(s) of Xtreme Manufacturing products to be replaced or repaired under this warranty program must be returned freight prepaid for inspection. An RMA (Returns material authorization) must be requested from Xtreme Manufacturing Warranty department, a copy to be placed with the returning component part(s).

8) All warranty replacement parts will be shipped freight prepaid (standard charges, ground shipping only) from the Xtreme Manufacturing Parts department, Service Department or from the Vendor to Dealer/SSC or Customer. Any other shipping method is the customer responsibility.

9) All warranty claims are subject to approval by Xtreme Manufacturing Service department. Xtreme Manufacturing reserves the right to limit or adjust claims with regard to defective parts, labor or travel time based on usual and customary guidelines.

10) Reimbursement policy, labor will be paid at 75% of posted hourly shop rate. Travel time will be paid at $50 per hour up to a maximum of 3 hours. Xtreme Manufacturing will pay 1 hour of troubleshooting time per warranty claim, unless expressly agreed otherwise in writing and in advance by Xtreme’s Warranty Department. An annual rate declaration must be supplied to the Xtreme Warranty administrator by January 31st and will be used as the reimbursable rate for that calendar year.
Xtreme Manufacturing Product Warranty Policy

REPLACEMENT PARTS WARRANTY

1. Any part replaced under this limited warranty is not subject to further warranty cover beyond the normal warranty period of the machine upon which the part was installed.
2. Any replacement parts sold (not delivered under a warranty claim) will be subject to a warranty period of (6) six months from the date of invoice.
3. Parts held by an authorized Distributor/SSCare covered under warranty for a period of (12) twelve months from the date of invoice, provided that those parts have been subject to appropriate storage to prevent damage and deterioration (conditional on Xtreme Manufacturing review).

CLAIM PROCEDURE

The Xtreme Manufacturing Warranty department must be notified within forty-eight hours (48) of any possible warranty situation during the applicable warranty period. Personnel performing major warranty repair or parts replacement must obtain specific approval by the Xtreme Manufacturing Warranty department prior to performing the warranty repair or replacement.

When a Distributor/SSC / Customer perceive a warranty issue to exist the following steps must be adhered to:

- Customer/SSC / Distributor to place a purchase order for genuine Xtreme Manufacturing replacement parts.
- Xtreme Manufacturing to dispatch parts via the requested method (in line with the required response time).
- Confirmation that a qualified technician is available to replace the part and that this person has been accepted by Xtreme Manufacturing to carry out such work under the warranty of the machine. Failure to do this may nullify the warranty.
- Customer / SSC / Distributor to allocate a warranty claim number to the repair.
- All correspondence in respect of the claim to be on an official Xtreme Manufacturing warranty claim form as supplied by Xtreme Manufacturing’s warranty department.
- All warranty claims must be submitted within 30 days of the date of the machine repair.

FREIGHT DAMAGE

- If a machine is received in a damaged condition, then the damage must be noted on the bill of lading and/or delivery documents and photographs must be taken at the point of delivery, prior to signing acceptance of the consignment.
- The freight company and Xtreme Manufacturing must be contacted by the Distributor and a damage claim registered by either party immediately.
Xtreme Manufacturing Product Warranty Policy

- The above requirements apply only to freight damage associated with equipment supplied by Xtreme Manufacturing transport. Customer freight issues are excluded from this warranty policy.

**THIS PRODUCT WARRANTY POLICY SPECIFICALLY EXCLUDES:**

1. Engines, motors, tires and batteries are manufactured by specialist suppliers to Xtreme Manufacturing, who furnish their own warranty policies. Xtreme Manufacturing will, however, to the extent permitted pass through any such warranty protection to the Distributor/SSC/Customer.

2. Xtreme Manufacturing products which has been modified or altered outside Xtreme Manufacturing factories without written approval, if such modification or alteration, in the sole judgment of Xtreme Manufacturing Engineering and/or Service Departments, adversely affects the stability, reliability or service life of the Xtreme Manufacturing product or any component thereof.

3. Any Xtreme Manufacturing product which has been subject to misuse and abuse, improper maintenance or accident. “Misuse” includes but is not limited to operation beyond the factory-rated load capacity and speeds. “Improper maintenance” includes but is not limited to failure to follow the recommendations contained in the Xtreme Manufacturing Operation, Maintenance, and repair Parts Manuals.

4. Normal wear of any Xtreme Manufacturing component/part(s). Normal wear of components may vary with the type, application or type of environment in which the machine may be used; such as, but not limited to sandblasting applications.

5. Routine maintenance, routine maintenance items and minor adjustments are not covered by this warranty, including but not limited to hydraulic fluid, filters and lubrication, paint and decals engine tune-up, brake adjustments etc. Xtreme Manufacturing will not cover leaks from fittings, hoses and any other connection points after the unit has been in service for 90 days or 150 hours of operation which ever comes first.

6. Any Xtreme Manufacturing product that has come into direct contact with any chemical or abrasive material.

7. Incidental or consequential expenses, losses, or damages related to any part or equipment failure, including but not limited to freight cost to transport the machine to a repair facility, downtime of the machine, lost time for workers, lost orders, lost rental revenue, lost profits, expenses or increased cost. This warranty is expressly in lieu of all other warranties, representations or liabilities of Xtreme Manufacturing, either expressed or implied, unless otherwise amended in writing by Xtreme Manufacturing.

8. Xtreme Manufacturing warranty policy does not cover any duties, taxes, environmental fees including without limitation, disposal or handling of tires, batteries and petrochemical items.

9. Items specifically excluded are: fuel injectors, motor brushes, glow plugs, contactor tips and springs, filters, lamp bulbs, lamp lenses, coolants, lubricants, brake pads and cleaning materials.

10. Failure of replacement parts due to fault misdiagnosis or incorrect fitting by the
Xtreme Manufacturing Product Warranty Policy

Distributor/SSC/ Customer.

XTREME MANUFACTURING MAKES NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION OF THIS LIMITED WARRANTY. XTREME MANUFACTURING MAKES NO IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND DISCLAIMS ALL LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO INJURY TO PERSONS OR PROPERTY.

Wherever possible the end customer shall obtain all warranty support & make all warranty claims through the local Xtreme Manufacturing authorized Distributor /SSC / Dealer. Warranty support should be from the Distributor /SSC / Dealer from whom the Xtreme Manufacturing product was purchased. Where Xtreme Manufacturing equipment is supplied directly from the factory, the end customer, if unable to contact a Distributor/SSC/ Dealer, may contact the Xtreme Manufacturing Warranty Department for further assistance.

APPEAL
The buyer may appeal in writing against a rejected or adjusted claim to Xtreme Manufacturing warranty department within a period of 21 days of receiving the rejection or adjustment notice. The appeal should be grounded on express reasons and supported by relevant evidence. Appeals received outside of this time limit will not be considered.
